The signal points to a broad-based economic contraction. This is easily the weakest reading since the GFC and is comparable to readings seen prior to Australia’s recessions in the 1990–91, 1982–83, 1974–75 and 1960–61.

The speed of the collapse in the Index is unprecedented. Previous lows in the Index growth rate were: March 1961 (−4.61%); August 1974 (−7.50%); February 1982 (−4.44%); January 1991 (−2.63%); and February 2009 (−5.93%).

In those previous cycles the deterioration gathered momentum over six to twelve months whereas in this cycle the growth has collapsed from −1.06% to −5.16% in just two months.

Our standard procedure is to assess the movement in the growth rate over the last six months, over that period it has fallen from −0.53% in November to the current −5.16%.

Two components account for the bulk of the 4.63ppt slump: US industrial production (−3.23ppts) and aggregate monthly hours worked (−1.72ppts). Both recorded startling declines over the last two months as the full impact of the COVID-19 health emergency and associated shutdowns showed through. US industrial production plunged 15.3% between February and April, the biggest decline since World War 2. Meanwhile, lockdowns in Australia triggered a 9.2% drop in hours worked in April, more than two and a half times larger than the biggest monthly variation seen in the forty years the data has been collected.

Other components have been more mixed, showing a slight improvement on a combined basis. Equity markets have regained some of their initial losses but are still down sharply for the year, the 19% drop in the S&P/ASX 200 component taking a further 0.79ppts of the Index growth rate since November. Other components have seen net improvements though: commodity prices (in AUD terms) adding 0.43ppts to the growth rate over the same period with some additional support coming from a widening yield spread (+0.23ppts); a modest lift in dwelling approvals (+0.19ppts); and less negative reads on Consumer Unemployment Expectations (+0.19ppts); and Consumer Expectations more generally (+0.08ppts).

In particular, the resurgence in Confidence we reported last week around the Westpac Melbourne Institute of Consumer Sentiment boosted the contributions from two components in the Index by 0.62ppts in April from March compared to a reduction of 0.36ppts in March.

The Leading Index growth rate is likely to recover as Coronavirus restrictions are removed. However ongoing public health concerns are likely to see restrictions continue to disrupt economic activity for many months to come.

We do not expect the economy to return to pre-Coronavirus levels of activity before 2022.

The Reserve Bank Board next meets on June 2. As we saw in the minutes for the May meeting the Board is committed to maintaining its significant support for the economy for the foreseeable future.

Bill Evans, Chief Economist

Investment Recommendations Disclosure

The material may contain investment recommendations, including information recommending an investment strategy. Reasonable steps have been taken to ensure that the material is presented in a clear, accurate and objective manner. Investment Recommendations for Financial Instruments covered by MAR are made in compliance with Article 20 MAR. Westpac does not apply MAR Investment Recommendation requirements to Spot Foreign Exchange which is out of scope for MAR.

Unless otherwise indicated, there are no planned updates to this Investment Recommendation at the time of publication. Westpac has no obligation to update, modify or amend this Investment Recommendation or to notify the recipients of this Investment Recommendation should any information, including opinion, forecast or estimate set out in this Investment Recommendation change or subsequently become inaccurate.

Westpac will from time to time dispose of and acquire financial instruments of companies covered in this Investment Recommendation as principal and act as a market maker or liquidity provider in such financial instruments.

Westpac does not have any proprietary positions in equity shares of issuers that are the subject of an investment recommendation.

Westpac may have provided investment banking services to the issuer in the course of the past 12 months.

Westpac does not permit any issuer to see or comment on any investment recommendation prior to its completion and distribution.

Individuals who produce investment recommendations are not permitted to undertake any transactions in any financial instruments or derivatives in relation to the issuers covered by the investment recommendations they produce.

Westpac has implemented policies and procedures, which are designed to ensure conflicts of interests are managed consistently and appropriately, and to treat clients fairly.

The following arrangements have been adopted for the avoidance and prevention of conflicts in interests associated with the provision of investment recommendations.

i. Chinese Wall/Cell arrangements;

ii. physical separation of various Business/Support Units;

iii. Strict and well defined wall/cell crossing procedures;

iv. a “need to know” policy;

v. documented and well defined procedures for dealing with conflicts of interest;

vi. reasonable steps by Compliance to ensure that the Chinese Wall/Cell arrangements remain effective and that such arrangements are adequately monitored.
