2015 Pillar 3 Report

Incorporating the requirements of APS330

SEPTEMBER 2015

Westpac GROUP

EST. 1817

Executive summary	3
Introduction	5
Risk appetite and risk types	6
Controlling and managing risk	7
Group structure	12
Capital Overview	14
Credit risk management	18
Credit risk exposures	25
Credit risk mitigation	51
Counterparty credit risk	54
Securitisation	56
Market risk	67
Operational risk	71
Equity risk	73
Interest Rate Risk in the Banking Book	75
Liquidity risk	77
Remuneration disclosures	79
Appendices	
Appendix I – Leverage ratio	84
Appendix II – Regulatory capital reconciliation	85
Appendix III – Regulatory consolidation	91
Appendix IV – Level 3 entities' asset and liabilities	95
Appendix V – Regulatory expected loss	97
Appendix VI – APS330 quantitative requirements	98
Glossary	101
Disclosure regarding forward-looking statements	106

In this report references to 'Westpac', 'Westpac Group', 'the Group', 'we', 'us' and 'our' are to Westpac Banking Corporation and its controlled entities (unless the context indicates otherwise).

In this report, unless otherwise stated or the context otherwise requires, references to '\$', 'AUD' or 'A\$' are to Australian dollars.

Any discrepancies between totals and sums of components in tables contained in this report are due to rounding.

In this report, unless otherwise stated, disclosures reflect APRA's implementation of Basel III.

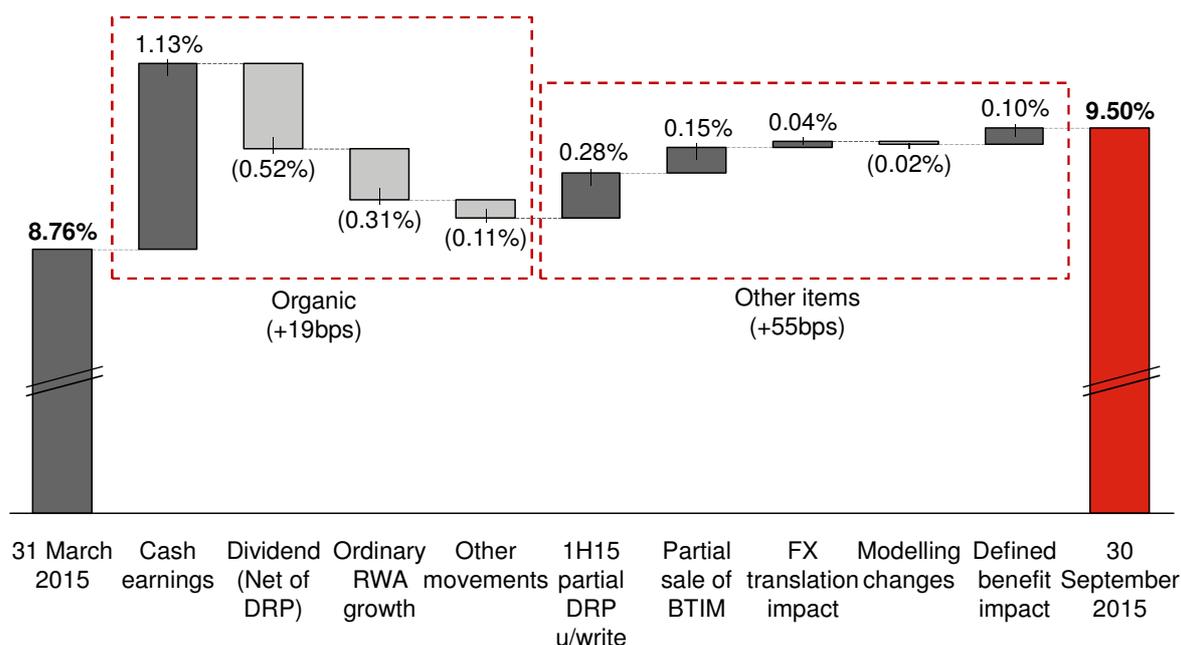

Information contained in or accessible through the websites mentioned in this report does not form part of this report unless we specifically state that it is incorporated by reference and forms part of this report. All references in this report to websites are inactive textual references and are for information only.

Pillar 3 Executive Summary

	30 September 2015	31 March 2015	30 September 2014
The Westpac Group at Level 2			
Common equity Tier 1 (CET1) capital after deductions \$m	34,069	30,388	29,724
Risk weighted assets (RWA) \$m	358,580	346,823	331,387
Common equity Tier 1 capital ratio %	9.5	8.8	9.0
Additional Tier 1 capital %	1.9	1.5	1.6
Tier 1 capital ratio %	11.4	10.3	10.6
Tier 2 capital %	1.9	1.8	1.7
Total regulatory capital ratio %	13.3	12.1	12.3

Westpac's CET1 capital ratio was 9.50% at 30 September 2015, 74 basis points higher than recorded at 31 March 2015.

Second Half 2015 common equity Tier 1 capital ratio movement

Organic capital generation of 19 basis points included:

- Second Half 2015 cash earnings of \$4.0 billion (113 basis point increase);
- The 2015 interim dividend payment net of shares issued to satisfy the DRP (52 basis point decrease). The DRP participation rate of 36% reflected shares being issued at a 1.5% discount;
- Increases in RWA excluding foreign currency translation impacts and modelling changes (31 basis point decrease); and
- Other movements included higher capitalised expenditure (5 basis point decrease) and higher capital retained in non-consolidated subsidiaries (5 basis points decrease).

A number of other items impacted CET1 by 55 basis points including:

- \$1.0 billion from shares issued under the First Half 2015 partial DRP underwrite (28 basis point increase);
- \$0.5 billion increase in CET1 capital from the partial sale of BTIM (15 basis point increase);
- Foreign currency translation impacts decreased credit RWA by \$1.7 billion (4 basis point increase), mostly related to our New Zealand operations and US\$ lending;
- A decrease in the accounting obligation for the defined benefit plan mainly reflecting changes in the discount rate used to value plan liabilities (10 basis point increase); and
- Modelling changes comprised of the introduction of Overnight Indexed Swap (OIS) discounting methodology which increased Market risk RWA by \$1.0 billion (2 basis point decrease).

This half, RWA increased 3.4% reflecting a rise in both credit RWA of \$7.3 billion and non-credit RWA of \$4.4 billion.

Risk weighted assets

\$m	30 September 2015	31 March 2015	30 September 2014
Credit risk	310,342	303,026	281,459
Market risk	10,074	7,900	8,975
Operational risk	31,010	30,136	29,340
Interest rate risk in the banking book	2,951	1,596	7,316
Other	4,203	4,165	4,297
Total	358,580	346,823	331,387

The increase in credit RWA included:

- Growth in the portfolio (excluding the items below) which added \$12.0 billion to credit RWA over the half;
- A decrease in RWA of \$1.7 billion due to foreign currency translation impacts mostly related to our New Zealand operations and US\$ lending;
- A decrease in RWA of \$0.2 billion from lower mark-to-market related credit risk; and
- Improvements in asset quality which led to a reduction in RWA of \$2.8 billion.

Non-credit RWA increased \$4.4 billion primarily due to:

- Interest rate risk in the banking book (IRRBB) RWA increased \$1.4 billion, mainly due to a lower embedded gain as market interest rates rose during the half;
- Market risk RWA increased \$2.2 billion due to the introduction of Overnight Indexed Swap (OIS) discounting methodology and an increase in the level of interest rate risk in the trading book; and
- Operational risk RWA increased \$0.9 billion.

Exposure at Default

Over the half, exposure at default (EAD) increased \$37.3 billion (up 4.2%). Most of the rise was due to an increase in corporate exposures and residential mortgages. Sovereign exposures also rose due to surplus liquidity being placed with government entities and central banks.

Leverage Ratio

Certain Authorised Deposit-taking Institutions are required to disclose an APRA leverage ratio¹ for reporting periods after 1 July 2015. APRA has not prescribed any minimum leverage ratio requirements at this time.

At 30 September 2015, Westpac's APRA leverage ratio was 4.8%.

Liquidity Coverage Ratio

The LCR requires banks to hold sufficient high-quality liquid assets, as defined, to withstand 30 days under a regulator-defined acute stress scenario. The LCR came into effect from 1 January 2015.

Westpac maintains a buffer over the regulatory minimum of 100%. The Group's LCR as at 30 September 2015, including the CLF of \$66 billion, was 121% (31 March 2015: 114%) and the average LCR for the quarter ending 30 September 2015 was 121%².

¹ Refer to Glossary. The APRA leverage ratio is based on the same definition of Tier 1 capital as used for APRA capital requirements and is not comparable to the Basel Committee for Banking Supervision leverage ratio calculation.

² Calculated as a simple average of the LCR for 31 July 2015, 31 August 2015 and 30 September 2015.

Westpac Banking Corporation is an Authorised Deposit-taking Institution (ADI) subject to regulation by APRA. APRA has accredited Westpac to apply advanced models permitted by the Basel III global capital adequacy regime to the measurement of its regulatory capital requirements. Westpac uses the Advanced Internal Ratings-Based approach (Advanced IRB) for credit risk and the Advanced Measurement Approach (AMA) for operational risk.

In accordance with APS330 Public Disclosure, financial institutions that have received this accreditation, such as Westpac, are required to disclose prudential information about their risk management practices on a semi-annual basis. A subset of this information must be disclosed quarterly.

The Structure of Westpac's Pillar 3 Report

This report describes Westpac's risk management practices and presents the prudential assessment of Westpac's¹ capital adequacy as at 30 September 2015. The sections are arranged as follows:

- 'Risk Appetite and Risk Types' defines the risks that Westpac manages;
- 'Controlling and Managing Risk' outlines the responsibilities of the Board of Directors of Westpac and executive risk management committees;
- 'Group Structure' defines the bases of measurement adopted by APRA and describes the principles of consolidation used for the purposes of determining Westpac's capital adequacy;
- 'Capital Overview' describes Westpac's capital management strategy and presents the capital adequacy ratios for the Westpac Group;
- 'Credit Risk Management' describes Westpac's approach to managing credit risk;
- 'Credit Risk Exposures' tabulates Westpac's credit risk exposures, including impaired and past due loans and loan impairment provisions;
- 'Credit Risk Mitigation' describes how Westpac reduces its credit risk by using collateral, guarantees or credit derivatives;
- 'Counterparty Credit Risk' describes Westpac's exposure to credit risk arising from its management of derivatives and securities financing transactions;
- 'Securitisation' explains how Westpac participates in the securitisation market;
- 'Market Risk' describes Westpac's approach to managing market risk;
- 'Operational Risk' describes Westpac's operational risk management approach;
- 'Equity Risk' describes Westpac's equity positions;
- 'Interest Rate Risk in the Banking Book' describes Westpac's approach to managing the structural interest rate risk incurred in its banking book;
- 'Liquidity Risk and Liquidity Coverage Ratio' (LCR) describes Westpac's approach to managing liquidity and sets out Westpac's LCR disclosure as specified in Attachment F of APS330;
- 'Remuneration Disclosure' outlines Westpac's approach to remuneration of senior managers and material risk takers;
- 'Appendix I – Leverage ratio' contains Westpac's leverage ratio disclosure as specified in Attachment E of APS330;
- 'Appendix II – Regulatory capital reconciliation' contains the reconciliation between Westpac's statutory and regulatory balance sheets and the capital disclosure template as required by Attachment A of APS330;
- 'Appendix III – Regulatory consolidation' lists all the entities that form part of the Westpac Group;
- 'Appendix IV – Level 3 entities' assets and liabilities' contains the standalone assets and liability balances for all the legal entities excluded from the regulatory scope of consolidation; and
- 'Appendix V – Regulatory expected loss' sets out how the capital deduction for regulatory expected loss is derived.

A cross-reference between the quantitative disclosures in this report and the quantitative disclosures required by Attachments A, C, D, E, F and G of APS330 is provided in Appendix VI on page 100.

Capital instruments included in regulatory capital

The reporting requirements for capital instruments under Attachment B of APS330 can be found on the regulatory disclosures section of the Westpac website² and are not included within this report. These disclosures are updated when the following occurs:

- A new capital instrument is issued that will form part of regulatory capital; or
- A capital instrument is redeemed, converted into CET1, written off, or its terms and conditions are changed.

¹ Westpac also takes risk in subsidiaries that are outside the scope of the Level 2 regulatory consolidation of the Westpac Group and this risk is not described in this report.

² <http://www.westpac.com.au/about-westpac/investor-centre/financial-information/basel-iii-risk-reports/>

Westpac's vision is to be one of the world's great *service* companies, helping our customers, communities and people to prosper and grow.

Westpac's appetite for risk is influenced by a range of factors, including whether a risk is considered consistent with its strategy (core risk) and whether an appropriate return can be achieved from taking that risk. Westpac has a lower appetite for risks that are not part of its strategy. Westpac seeks to achieve an appropriate return on risk and prices its products accordingly.

Westpac distinguishes between different types of risk and takes an integrated approach toward identifying, assessing and managing all material risks including through the annual review of the Risk Management Strategy and additional controls through supporting frameworks and policies.

Overview of risk types

Key risks	<ul style="list-style-type: none">• credit risk - the risk of financial loss where a customer or counterparty fails to meet their financial obligations to Westpac;• liquidity risk - the risk that the Group will be unable to fund assets and meet obligations as they become due;• market risk - the risk of an adverse impact on earnings resulting from changes in market factors, such as foreign exchange rates, interest rates, commodity prices and equity prices. This includes interest rate risk in the banking book – the risk to interest income from a mismatch between the duration of assets and liabilities that arises in the normal course of business activities;• conduct risk - the risk arising from unfair or inappropriate behaviour or practices of the Westpac Group or its staff;• operational risk - the risk of loss resulting from inadequate or failed internal processes, people and systems or from external events. This definition is aligned to the regulatory (Basel II) definition, including legal and regulatory risk but excluding strategic and reputation risk; and• compliance risk - the risk of legal or regulatory sanction, financial or reputational loss, arising from our failure to abide by the compliance obligations required of us.
Other risks	<ul style="list-style-type: none">• business risk - the risk associated with the vulnerability of a line of business to changes in the business environment;• sustainability risk – the risk of reputational or financial loss due to failure to recognise or address material existing or emerging sustainability related environmental, social or governance issues;• equity risk - the potential for financial loss arising from movements in equity values. Equity risk may be direct, indirect or contingent;• insurance risk - the risk of mis-estimation of the expected cost of insured events, volatility in the number or severity of insured events, and mis-estimation of the cost of incurred claims;• related entity (contagion) risk - the risk that problems arising in other Westpac Group members compromise the financial and operational position of the authorised deposit-taking institution in the Westpac Group; and• reputation risk - the risk to earnings or capital from negative public opinion resulting from the loss of reputation or public trust and standing.

We adopt a Three Lines of Defence approach to risk management which reflects our culture of ‘risk is everyone’s business’ and that all employees are responsible for identifying and managing risk and operating within the Group’s desired risk profile. The Board-approved Risk Management Strategy identifies a sound risk culture of ‘risk is everyone’s business’ and awareness of risk management supported by regular communication as an essential element of sound risk management. Effective risk management enables us to:

- accurately measure our risk profile and balance risk and reward within our risk appetite, increasing financial growth opportunities and mitigating potential loss or damage;
- protect Westpac’s depositors, policyholders and investors by maintaining a strong balance sheet;
- embed adequate controls to guard against excessive risk or undue risk concentration; and
- meet our regulatory and compliance obligations.

The Board is responsible for reviewing and approving our overall risk management strategy, including determining our appetite for risk. The Board has delegated to the Board Risk & Compliance Committee responsibility for providing recommendations to the Board on Westpac Group’s risk-reward strategy, setting risk appetite, approving frameworks and policies for managing risk, and determining whether to accept risks beyond management’s approval discretion.

The annual review of the Risk Management Strategy was completed by the Board Risk & Compliance Committee and was approved by the Board during the year ended 30 September 2015.

Risk management governance structure

Board	<ul style="list-style-type: none"> • reviews and approves our overall Risk Management Strategy.
Board Risk & Compliance Committee (BRCC)	<ul style="list-style-type: none"> • provides recommendations to the Board on Westpac Group’s risk-reward strategy; • sets risk appetite; • reviews and approves the frameworks for managing risk; • reviews and approves the limits and conditions that apply to credit risk approval authority delegated to the CEO, CFO and CRO and any other officers of the Westpac Group to whom the Board has delegated credit approval authority; • monitors the risk profile, performance, capital levels, exposures against limits and the management and control of our risks; • monitors changes anticipated in the economic and business environment and other factors relevant to our risk profile and risk appetite; • oversees the development and ongoing review of key policies that support our frameworks for managing risk; and • may approve accepting risks beyond management’s approval discretion. <p>From the perspective of specific types of risk, the Board Risk & Compliance Committee role includes:</p> <ul style="list-style-type: none"> • credit risk – approving key policies and limits supporting the Credit Risk Management Framework, and monitoring the risk profile, performance and management of our credit portfolio; • liquidity risk – approving key policies and limits supporting the Liquidity Risk Management Framework, including our annual funding strategy and liquidity requirements, and recovery and resolution plans and monitoring the liquidity risk profile; • market risk – approving key policies and limits supporting the Market Risk Management Framework, including, but not limited to, the Value at Risk and Net Interest Income at Risk limits, and monitoring the market risk profile; • operational risk – monitoring the operational risk profile, the performance of operational risk management and controls, and the development and ongoing review of operational risk policies supporting the Operational Risk Management Framework;

Risk management governance structure (continued)

- reputation risk – reviewing and approving the Reputation Risk Management Framework and reviewing the monitoring of the performance of reputation risk management and controls; and
- compliance risk – reviewing compliance risk processes and our compliance with applicable laws, regulations and regulatory requirements, discussing with management and the external auditor any material correspondence with regulators or government agencies and any published reports that raise material issues, and reviewing complaints and whistleblower concerns.

The Board Risk & Compliance Committee also:

- approves the Internal Capital Adequacy Assessment Process and in doing so reviews the outcomes of enterprise wide stress testing, sets the preferred capital ranges for regulatory capital having regard to Westpac internal economic capital measures, and reviews and monitors capital levels for consistency with the Westpac Group’s risk appetite;
- provides relevant periodic assurances to the Board Audit Committee regarding the operational integrity of the risk management framework; and
- refers to other Board Committees any matters that come to the attention of the Board Risk & Compliance Committee that are relevant for those respective Board Committees.

Board Committees with a Risk Focus

Board Audit Committee (BAC)

- oversees the integrity of financial statements and financial reporting systems, and matters relating to taxation risks.

Board Remuneration Committee (BRC)

- reviews any matters raised by the BRCC with respect to risk-adjusted remuneration.

Board Technology Committee

- oversees the technology strategy, implementation, and risks associated with major technology programs.

Executive Team

Westpac Executive Team (ET)

- executes the Board-approved strategy;
- delivers the Group’s various strategic and performance goals within the approved risk appetite; and
- monitors key risks within each business unit, capital adequacy and the Group’s reputation.

Executive risk committees

Westpac Group Executive Risk Committee (RISKCO)

- leads the management and oversight of material risks across the Westpac Group within the context of the risk appetite determined by the BRCC;
- oversees the embedding of the Risk Management Strategy in the Group’s approach to risk governance;
- oversees risk-related management frameworks and key supporting policies;
- oversees the Group’s credit, operational, compliance, and market risk profiles;
- oversees reputation risk and sustainability risk management frameworks and key supporting policies; and
- identifies emerging credit, operational, compliance and market risks and allocates responsibility for assessing impacts and implementing appropriate actions to address these.

Risk management governance structure (continued)

Westpac Group Asset & Liability Committee (ALCO)

- leads the optimisation of funding and liquidity risk-reward across the Group;
- reviews the level and quality of capital to ensure that it is commensurate with the Group's risk profile, business strategy and risk appetite;
- oversees the Liquidity Risk Management Framework and key policies;
- oversees the funding and liquidity risk profile and balance sheet risk profile; and
- identifies emerging funding and liquidity risks and appropriate actions to address these.

Westpac Group Credit Risk Committee (CREDCO)

- leads the optimisation of credit risk-reward across the Group;
- reviews and oversees the Credit risk-related Risk Management Frameworks and key supporting policies;
- oversees Westpac's credit risk profile;
- identifies emerging credit risks, allocates responsibility for assessing impacts, and responds as appropriate; and
- facilitates continuous improvement in credit risk management by providing a forum for testing risk tolerances and debating alternate approaches.

Westpac Group Remuneration Oversight Committee (ROC)

- provides assurance that the remuneration arrangements across the Group have been examined from a People, Risk and Finance perspective;
 - responsible for ensuring that risk is embedded in all key aspects of our remuneration framework;
 - reviews and makes recommendations to the CEO for recommendation to the Board Remuneration Committee on the Group Remuneration Policy and provides assurance that remuneration arrangements across the Group encourage behaviour that supports Westpac's long-term financial soundness and the risk management framework;
 - reviews and monitors the remuneration arrangements (other than for Group Executives) for Responsible Persons (as defined in the Group's Statutory Officers Fit and Proper Policy), risk and financial control personnel, and all other employees for whom a significant portion of total remuneration is based on performance and whose activities, either individually or collectively, may affect the financial soundness of Westpac; and
 - reviews and recommends to the CEO for recommendation to the BRC the criteria and rationale for determining the total quantum of the Group variable reward pool.
-

Risk management governance structure (continued)

Risk and Compliance functions	Risk Function <ul style="list-style-type: none">• develops Group-wide risk management frameworks for approval by the BRCC;• directs the review and development of key policies supporting the risk management frameworks;• develops division-specific policies, risk appetite statements, controls, procedures, and monitoring and reporting capability that align to the frameworks approved by the BRCC;• establishes risk concentration limits and monitors risk concentrations; and• monitors emerging risk issues. Compliance Function <ul style="list-style-type: none">• develops the Group-level compliance framework for approval by the BRCC;• directs the review and development of compliance policies, compliance plans, controls and procedures;• monitors compliance and regulatory obligations and emerging regulatory developments; and• reports on compliance standards.
Independent internal review	Group Audit <ul style="list-style-type: none">• reviews the adequacy and effectiveness of management controls for risk.
Divisional business units	Business Units <ul style="list-style-type: none">• responsible for identifying, evaluating and managing the risks that they originate within approved risk appetite policies; and• establish and maintain appropriate risk management controls, resources and self-assurance processes.

Roles and responsibilities

Our approach to risk management is that ‘risk is everyone’s business’ and that responsibility and accountability for risk begins with the business units that originate the risk.

The 1st Line of Defence – Risk identification, risk management and self-assurance

Divisional business units are responsible for identifying, evaluating and managing the risks that they originate within approved risk appetite and policies. They are required to establish and maintain appropriate risk management controls, resources and self-assurance processes.

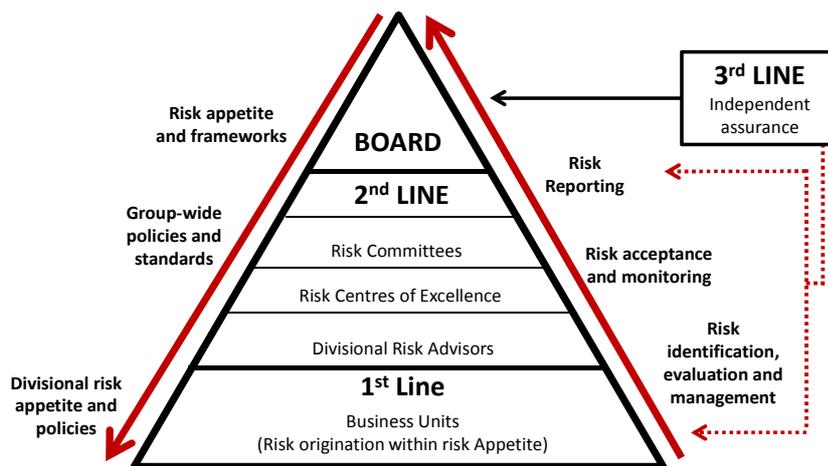

The 2nd Line of Defence – Establishment of risk management frameworks and policies and risk management oversight

Our 2nd Line of Defence is a separate risk and compliance advisory, control and monitoring function which establishes frameworks, policies, limits and processes for the management, monitoring and reporting of risk. The 2nd line of Defence may approve risks outside the authorities granted to the 1st Line, and evaluates and opines on the adequacy and effectiveness of 1st Line controls and application of frameworks and policies and, where necessary, requires improvement and monitors the 1st Line’s progress toward remediation of identified deficiencies.

The 3rd Line of Defence – Independent assurance

Our Group Audit function independently evaluates the adequacy and effectiveness of the Group’s overall risk management framework and controls.

Our overall risk management approach is summarised in the following diagram:

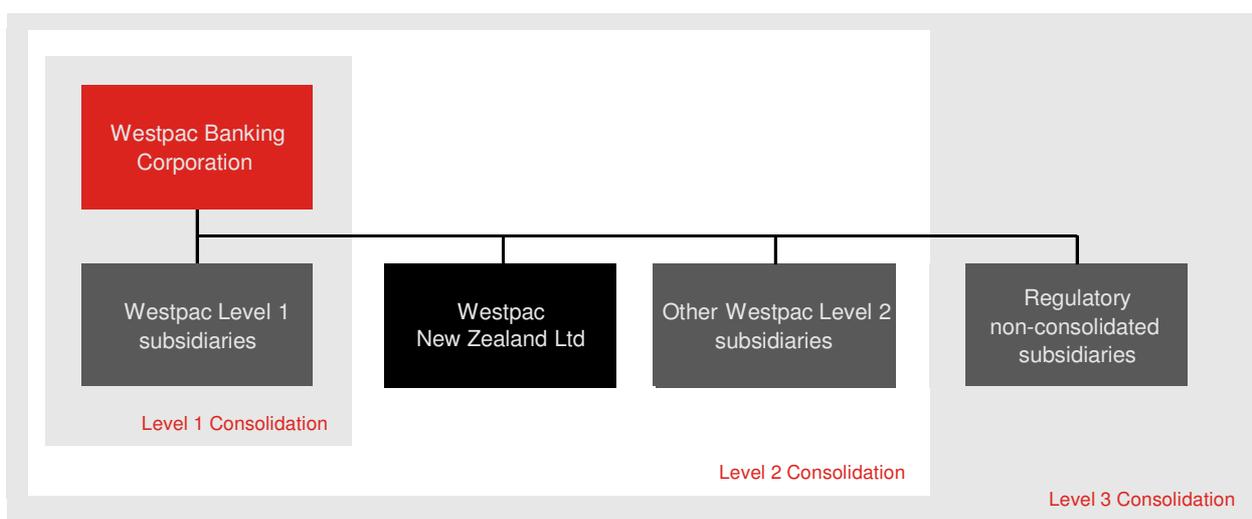

Westpac seeks to ensure that it is adequately capitalised at all times. APRA applies a tiered approach to measuring Westpac's capital adequacy¹ by assessing financial strength at three levels:

- Level 1, comprising Westpac Banking Corporation and its subsidiary entities that have been approved by APRA as being part of a single 'Extended Licensed Entity' (ELE) for the purposes of measuring capital adequacy;
- Level 2, the consolidation of Westpac Banking Corporation and all its subsidiary entities except those entities specifically excluded by APRA regulations. The head of the Level 2 group is Westpac Banking Corporation; and
- Level 3, the consolidation of Westpac Banking Corporation and all its subsidiary entities.

Unless otherwise specified, all quantitative disclosures in this report refer to the prudential assessment of Westpac's financial strength on a Level 2 basis².

The Westpac Group

The following diagram shows the Level 3 conglomerate group and illustrates the different tiers of regulatory consolidation.

Accounting consolidation³

The consolidated financial statements incorporate the assets and liabilities of all subsidiaries (including structured entities) controlled by Westpac. Westpac and its subsidiaries are referred to collectively as the 'Group'. The effects of all transactions between entities in the Group are eliminated. Control exists when the parent entity is exposed to, or has rights to, variable returns from its involvement with an entity, and has the ability to affect those returns through its power over that entity. Subsidiaries are fully consolidated from the date on which control commences and they are no longer consolidated from the date that control ceases.

Group entities excluded from the regulatory consolidation at Level 2

Regulatory consolidation at Level 2 covers the global operations of Westpac and its subsidiary entities, including other controlled banking, securities and financial entities, except for those entities involved in the following business activities:

- insurance;
- acting as manager, responsible entity, approved trustee, trustee or similar role in relation to funds management;
- non-financial (commercial) operations; or
- special purpose entities to which assets have been transferred in accordance with the requirements of APS120 Securitisation.

Retained earnings and equity investments in subsidiary entities excluded from the consolidation at Level 2 are deducted from capital, with the exception of securitisation special purpose entities.

¹ APS110 Capital Adequacy outlines the overall framework adopted by APRA for the purpose of assessing the capital adequacy of an ADI.

² Impaired assets and provisions held in Level 3 entities are excluded from the tables in this report.

³ Refer to Note 1 of Westpac's 2015 Annual Report for further details.

Westpac New Zealand Limited

Westpac New Zealand Limited (WNZL), a wholly owned subsidiary entity¹, is a registered bank incorporated in New Zealand and regulated by the Reserve Bank of New Zealand. WNZL uses the Advanced IRB approach for credit risk and the AMA for operational risk. For the purposes of determining Westpac's capital adequacy, Westpac New Zealand Limited is consolidated at Level 2.

Restrictions and major impediments on the transfer of funds or regulatory capital within the Group

Minimum capital ('thin capitalisation') rules

Tax legislation in most jurisdictions in which the Group operates (including Australia, New Zealand and the United Kingdom) prescribes minimum levels of capital that must be retained in that jurisdiction to avoid a portion of the interest costs incurred in the jurisdiction ceasing to be tax deductible. Capital for these purposes includes both contributed capital and non-distributed retained earnings. Westpac seeks to maintain sufficient capital/retained earnings to comply with these rules.

Tax costs associated with repatriation

Repatriation of retained earnings (and capital) may result in tax being payable in either the jurisdiction from which the repatriation occurs or Australia on receipt of the relevant amounts. This cost would reduce the amount actually repatriated.

Intra-group exposure limits

Exposures to related entities are managed within the prudential limits prescribed by APRA in APS222 Associations with Related Entities.² Westpac has an internal limit structure and approval process governing credit exposures to related entities. This structure and approval process, combined with APRA's prudential limits, is designed to reduce the potential for unacceptable contagion risk.

Prudential regulation of subsidiary entities

Certain subsidiary banking, insurance and trustee entities are subject to local prudential regulation in their own right, including capital adequacy requirements and investment or intra-group exposure limits. Westpac seeks to ensure that its subsidiary entities are adequately capitalised and adhere to regulatory requirements at all times. There are no capital deficiencies in subsidiary entities excluded from the regulatory consolidation at Level 2.

¹ Other subsidiary banking entities in the Group include Westpac Bank of Tonga, Westpac Bank-PNG-Limited, Westpac Bank Samoa Limited and Westpac Europe Limited. On 14th July 2015, Westpac announced the completion of the sale of its banking operations in Cook Islands, Samoa and Tonga to the Bank of South Pacific Limited. On 30 October, Westpac completed the sale of its banking operations in the Solomon Islands.

² For the purposes of APS222, subsidiaries controlled by Westpac, other than subsidiaries that form part of the ELE, represent 'related entities'. Prudential and internal limits apply to intra-group exposures between the ELE and related entities, both on an individual and aggregate basis.

Capital Structure

This table shows Westpac's capital resources under APS111 Capital Adequacy: Measurement of Capital.

\$m	30 September 2015	31 March 2015	30 September 2014
Tier 1 capital			
Common equity Tier 1 capital			
Paid up ordinary capital	29,280	27,237	26,943
Treasury shares	(308)	(304)	(239)
Equity based remuneration	1,055	1,020	935
Foreign currency translation reserve	(217)	(203)	(240)
Accumulated other comprehensive income	(18)	137	125
Non-controlling interests - other	62	63	60
Retained earnings	23,172	21,275	20,641
Less retained earnings in life and general insurance, funds management and securitisation entities	(1,189)	(1,286)	(1,223)
Deferred fees	135	107	135
Total common equity Tier 1 capital	51,972	48,046	47,137
Deductions from common equity Tier 1 capital			
Goodwill (excluding funds management entities)	(8,871)	(9,019)	(9,076)
Deferred tax assets	(1,363)	(1,330)	(1,354)
Goodwill in life and general insurance, funds management and securitisation entities	(1,049)	(1,255)	(1,253)
Capitalised expenditure	(1,576)	(1,404)	(1,212)
Capitalised software	(1,461)	(1,932)	(1,921)
Investments in subsidiaries not consolidated for regulatory purposes	(1,411)	(1,348)	(1,327)
Regulatory expected loss in excess of eligible provisions ¹	(696)	(734)	(650)
General reserve for credit losses adjustment	(112)	(107)	(133)
Securitisation	(5)	(7)	(7)
Equity investments	(1,076)	(388)	(341)
Regulatory adjustments to fair value positions	(281)	(127)	(132)
Other Tier 1 deductions	(2)	(7)	(7)
Total deductions from common equity Tier 1 capital	(17,903)	(17,658)	(17,413)
Total common equity Tier 1 capital after deductions	34,069	30,388	29,724
Additional Tier 1 capital			
Basel III complying instruments	4,019	2,694	2,694
Basel III non complying instruments	2,710	2,660	2,579
Total Additional Tier 1 capital	6,729	5,354	5,273
Net Tier 1 regulatory capital	40,798	35,742	34,997
Tier 2 capital			
Basel III complying instruments	2,882	2,538	1,925
Basel III non complying instruments	4,098	4,045	3,899
Eligible general reserve for credit loss	80	59	78
Basel III transitional adjustment	(118)	(67)	-
Total Tier 2 capital	6,942	6,575	5,902
Deductions from Tier 2 capital			
Investments in subsidiaries not consolidated for regulatory purposes	(140)	(140)	(140)
Holdings of own and other financial institutions Tier 2 capital instruments	(66)	(62)	(58)
Total deductions from Tier 2 capital	(206)	(202)	(198)
Net Tier 2 regulatory capital	6,736	6,373	5,704
Total regulatory capital	47,534	42,115	40,701

¹ An explanation of the relationship between this deduction, regulatory expected loss and provisions for impairment charges is contained in Appendix V.

Capital management strategy

Westpac's approach seeks to balance the fact that capital is an expensive form of funding with the need to be adequately capitalised. Westpac considers the need to balance efficiency, flexibility and adequacy when determining sufficiency of capital and when developing capital management plans.

Westpac evaluates these considerations through an Internal Capital Adequacy Assessment Process (ICAAP), the key features of which include:

- the development of a capital management strategy, including preferred capital range, capital buffers and contingency plans;
- consideration of both economic and regulatory capital requirements;
- a process that challenges the capital measures, coverage and requirements which incorporates amongst other things, the impact of adverse economic scenarios; and
- consideration of the perspectives of external stakeholders including rating agencies, equity investors and debt investors.

Westpac's preferred capital range

At 30 September 2015, Westpac's preferred range for its CET1 capital ratio was 8.75%-9.25%. The CET1 preferred range takes into consideration:

- Current regulatory minimums, and capital conservation and D-SIB buffers;
- Stress testing to calibrate an appropriate buffer against a downturn; and
- Quarterly volatility of capital ratios under Basel III due to the half and yearly cycle of dividend payments.

Westpac's capital adequacy ratios

%	30 September 2015	31 March 2015	30 September 2014
The Westpac Group at Level 2			
Common equity Tier 1 capital ratio	9.5	8.8	9.0
Additional Tier 1 capital	1.9	1.5	1.6
Tier 1 capital ratio	11.4	10.3	10.6
Tier 2 capital	1.9	1.8	1.7
Total regulatory capital ratio	13.3	12.1	12.3
The Westpac Group at Level 1			
Common equity Tier 1 capital ratio	9.7	8.7	9.2
Additional Tier 1 capital	2.1	1.7	1.8
Tier 1 capital ratio	11.8	10.4	11.0
Tier 2 capital	2.1	2.1	1.9
Total regulatory capital ratio	13.9	12.5	12.9

Westpac New Zealand Limited's capital adequacy ratios

%	30 September 2015	31 March 2015	30 September 2014
Westpac New Zealand Limited			
Common equity Tier 1 capital ratio	11.1	11.6	11.9
Additional Tier 1 capital	-	-	-
Tier 1 capital ratio	11.1	11.6	11.9
Tier 2 capital	2.3	-	-
Total regulatory capital ratio	13.4	11.6	11.9

Capital requirements

This table shows risk weighted assets and associated capital requirements¹ for each risk type included in the regulatory assessment of Westpac's capital adequacy. Westpac's approach to managing these risks, and more detailed disclosures on the prudential assessment of capital requirements, are presented in the following sections of this report.

30 September 2015 \$m	IRB Approach	Standardised Approach ²	Total Risk Weighted Assets	Total Capital Required ¹

Total			331,387	26,511

¹ Capital requirements are expressed as 8% of total risk weighted assets.

² Westpac's Standardised risk weighted assets are categorised based on their equivalent IRB categories.

³ Mark-to-market related credit risk and is measured under the standardised approach. It is also known as Credit Valuation Adjustment (CVA) risk.

⁴ APRA approved the AMA approach for the calculation of Lloyds operational risk RWA from December 2014. For periods prior to December 2014 Westpac applied the partial use approach, as approved by APRA, and the business acquired from Lloyds was measured under the Standardised approach as defined under APS114 Capital Adequacy: Standardised Approach to Operational Risk.

⁵ Other assets include cash items, unsettled transactions, fixed assets and other non-interest earning assets.

Credit risk is the potential for financial loss where a customer or counterparty fails to meet their financial obligations to Westpac. Westpac maintains a credit risk management framework and a number of supporting policies, processes and controls governing the assessment, approval and management of customer and counterparty credit risk. These incorporate the assignment of risk grades, the quantification of loss estimates in the event of default, and the segmentation of credit exposures.

Structure and organisation

The CRO is responsible for the effectiveness of overall risk management throughout Westpac, including credit risk. Authorised officers have delegated authority to approve credit risk exposures, including customer risk grades, other credit parameters and their ongoing review. A portion of consumer lending is subject to automated scorecard-based approval. Our largest exposures are approved by our most experienced credit officers. Line business management is responsible for managing credit risks accepted in their business and for maximising risk-adjusted returns from their business credit portfolios, within the approved risk appetite, risk management framework and policies.

Credit risk management framework and policies

Westpac maintains a credit risk management framework and supporting policies that are designed to clearly define roles and responsibilities, acceptable practices, limits and key controls.

The Credit Risk Management Framework describes the principles, methodologies, systems, roles and responsibilities, reports and controls that exist for managing credit risk in Westpac. The Credit Risk Rating System policy describes the credit risk rating system philosophy, design, key features and uses of rating outcomes.

Concentration risk policies cover individual counterparties, specific industries (e.g. property) and individual countries. In addition, there are policies covering risk appetite statements, ESG credit risks and the delegation of credit approval authorities.

At the divisional level, credit manuals embed the Group's framework requirements for application in line businesses. These manuals include policies covering the origination, evaluation, approval, documentation, settlement and on-going management of credit risks, and sector policies to guide the extension of credit where industry-specific guidelines are considered necessary.

Credit approval limits govern the extension of credit and represent the formal delegation of credit approval authority to responsible individuals throughout the organisation.

Approach

Westpac adopts two approaches to managing credit risk depending upon the nature of the customer and the product.

Transaction-managed approach

For larger customers, Westpac evaluates credit requests by undertaking detailed individual customer and transaction risk analysis (the 'transaction-managed' approach). Such customers are assigned a customer risk grade (CRG) representing Westpac's estimate of their probability of default (PD). Each facility is assigned a loss given default (LGD). The Westpac credit risk rating system has 20 risk grades for non-defaulted customers and 10 risk grades for defaulted customers. Non-defaulted CRGs down to the level of normally acceptable risk (i.e. D grade – see table below) are mapped to Moody's and Standard & Poor's (S&P) external senior ranking unsecured ratings. This mapping is reviewed annually and allows Westpac to integrate the rating agencies' default history with internal historical data when calculating PDs.

The final assignment of CRGs and LGDs is approved by authorised credit approvers with appropriate delegated approval authority. All material credit exposures are approved by authorised Credit Officers who are part of the risk management stream and operate independently of the areas originating the credit risk proposals. Credit Officer decisions are subject to reviews to ensure consistent quality. Divisional operational units are responsible for maintaining accurate and timely recording of all credit risk approvals and changes to customer and facility data. These units also operate independently of both the areas originating the credit risk proposals and the credit risk approvers. Appropriate segregation of functions is one of the key requirements of our credit risk management framework.

Program-managed approach

High-volume retail customer credit portfolios with homogenous credit risk characteristics are managed on a statistical basis according to pre-determined objective criteria (the 'program-managed' approach). Program-managed exposure to a consumer customer may exceed \$1 million. Business customer exposures are transaction managed when the exposure is in excess of \$1 million, or when the exposure includes complex products. Quantitative scorecards are used to assign application and behavioural scores to enable risk-based decision making within these portfolios. The scorecard outcomes and decisions are regularly monitored and validated against subsequent customer performance and scorecards are recalibrated or rebuilt when required. For capital estimation and other purposes, risk-based customer segments are created based upon modelled expected PD, EAD and LGD. Accounts are then assigned to respective segments based on customer and account characteristics. Each segment is assigned a quantified measure of its PD, LGD and EAD.

For both transaction-managed and program-managed approaches, CRGs, PDs and LGDs are reviewed at least annually.

Mapping of Westpac risk grades

The table below shows the current alignment between Westpac's CRGs and the corresponding external rating. Note that only high-level CRG groupings are shown.

Westpac customer risk grade	Standard & Poor's rating	Moody's rating
A	AAA to AA–	Aaa to Aa3
B	A+ to A–	A1 to A3
C	BBB+ to BBB–	Baa1 to Baa3
D	BB+ to B+	Ba1 to B1
Westpac Rating		
E	Watchlist	
F	Special mention	
G	Substandard/default	
H	Default	

For Specialised Lending Westpac maps exposures to the appropriate supervisory slot based on an assessment that takes into account borrower strength and security quality, as required by APS 113.

Mapping of Basel categories to Westpac portfolios

APS113 Capital Adequacy: Internal Ratings-Based Approach to Credit Risk, states that under the Advanced IRB approach to credit risk, an ADI must categorise banking book exposures into six broad IRB asset classes and apply the prescribed treatment for those classes to each credit exposure within them for the purposes of deriving its regulatory capital requirement. Standardised and Securitised portfolios are subject to treatment under APS112 Capital Adequacy: Standardised Approach to Credit Risk and APS120 Securitisation respectively.

APS Asset Class	Sub-asset class	Westpac category	Segmentation criteria
Corporate	Corporate	Corporate	All transaction-managed customers not elsewhere classified where annual turnover exceeds \$50 million ¹ .
	SME Corporate	Business Lending	All transaction-managed customers not elsewhere classified where annual turnover is \$50 million or less.
	Project Finance	Specialised Lending-Project Finance	Applied to transaction-managed customers where the primary source of debt service, security and repayment is derived from the revenue generated by a completed project (e.g. infrastructure such as toll roads or railways).
	Income-producing Real Estate	Specialised Lending-Property Finance	Applied to transaction-managed customers where the primary source of debt service, security and repayment is derived from either the sale of a property development or income produced by one or more investment properties ² .
Sovereign		Sovereign	Applied to transaction-managed exposures backed by governments.
Bank		Bank	Applied to transaction-managed exposures to deposit-taking institutions and foreign equivalents.
Residential Mortgage		Residential Mortgages	All program-managed exposures secured by residential mortgages ³ .
Qualifying Revolving Retail		Australian Credit Cards	Program-managed credit cards with low volatility in loss rates. The New Zealand cards portfolio does not currently meet the criteria for Qualifying Revolving Retail and is classified in Other Retail.
Other Retail		Small Business	Program-managed business lending exposures under \$1 million ⁴ .
		Other Retail	All other program-managed lending to retail customers, including New Zealand credit cards.

¹ Includes all NZ agribusiness loans, regardless of turnover.

² Excludes large diversified property groups and property trusts, which appear in the Corporate asset class.

³ For periods prior to 31 March 2015 business lending under \$1 million fully secured by residential property were included.

⁴ For periods prior to 31 March 2015 business lending under \$1 million fully secured by residential property were excluded.

Mapping of Credit risk approach to Basel categories and exposure types

Approach	APS asset class	Types of exposures
Transaction-Managed Portfolios	Corporate	Direct lending
	Sovereign	Contingent lending
	Bank	Derivative counterparty
		Asset warehousing
		Underwriting
		Secondary market trading
		Foreign exchange settlement
		Other intra-day settlement obligations
Program-Managed Portfolios	Residential mortgage	Mortgages
		Equity access loans
	Qualifying revolving retail	Australian credit cards
	Other retail	Personal loans
		Overdrafts
		New Zealand credit cards
		Auto and equipment finance
		Business development loans
		Business overdrafts
		Other term products

Internal ratings process for transaction-managed portfolios

The process for assigning and approving individual customer PDs and facility LGDs involves:

- Business unit representatives recommend the CRG and facility LGDs under the guidance of criteria set out in established credit policies. Each CRG is associated with an estimated PD;
- Authorised officers evaluate the recommendations and approve the final CRG and facility LGDs. Credit officers may override line business unit recommendations;
- An expert judgement decisioning process is employed to evaluate CRG and the outputs of various risk grading models are used as one of several inputs into that process; and
- Authorised officers decisions are subject to reviews to ensure consistent quality.

For on-going exposures to transaction-managed customers, risk grades and facility LGDs are required to be reviewed at least annually, but also whenever material changes occur.

No material deviations from the reference definition of default are permitted.

Internal ratings process for program-managed portfolios

The process for assigning PDs, LGDs and EADs to the program-managed portfolio involves dividing the portfolio into a number of pools per product. These pools are created by analysing the homogeneity of risk characteristics that have historically proven predictive in determining whether an account is likely to go into default.

No material deviations from the reference definition of default are permitted.

Internal credit risk ratings system

In addition to using the credit risk estimates as the basis for regulatory capital purposes, they are also used for the purposes described below:

Economic capital - Westpac allocates economic capital to all exposures. Economic capital includes both credit and non-credit components. Economic credit capital is allocated using a framework that considers estimates of PD, LGD, EAD, total committed exposure and loan tenor, as well as measures of portfolio composition not reflected in regulatory capital formulae.

Provisioning - Impairment provisions are held by Westpac to cover credit losses that are incurred in the loan portfolio. Provisioning includes both individual and collective components. Individual provisions are calculated on impaired loans taking into account management's best estimate of the present value of future cashflows.

Collective provisions are established on a portfolio basis using a framework that considers PD, LGD, EAD, total committed exposure, emergence periods, level of arrears and recent past experience.

Risk-adjusted performance measurement - Business performance is measured using allocated capital, which incorporates charges for economic capital and regulatory capital, including credit capital and capital for other risk types.

Pricing - Westpac prices loans to produce an acceptable return on the capital allocated to the loan. Returns include interest income and fees after expected credit losses and other costs.

Credit approval - For transaction-managed facilities, approval authorities are tiered based on the CRG, with lower limits applicable for customers with a higher PD. Program-managed facilities are approved on the basis of application scorecard outcomes and product based approval authorities.

Control mechanisms for the credit risk rating system include:

- Westpac's credit risk rating system is reviewed annually to confirm that the rating criteria and procedures are appropriate given the current portfolio and external conditions;
- All models materially impacting the risk rating process are periodically reviewed in accordance with Westpac's model risk policy;
- Specific credit risk estimates (including PD, LGD and EAD levels) are overseen, reviewed annually and approved by the Credit Risk Estimates Committee (a sub-committee of RISKCO);
- Credit Risk Assurance undertake an independent annual end-to-end technical and operational review of the overall process; and
- RISKCO and BRCC monitor the risk profile, performance and management of Westpac's credit portfolio and the development and review of key credit risk policies.

Risk reporting

A comprehensive report on Westpac's credit risk portfolio is provided to CREDCO, RISKCO and BRCC quarterly. It details the current level of impairment losses, stressed exposures, delinquency trends, provisions, impaired assets and key performance metrics. It reports on portfolio concentrations and large exposures.

Credit risk and asset quality are also reported to the Board each month, including details of impairment losses, stressed exposures, delinquency trends and key performance metrics.

¹ Includes regulatory expected losses for defaulted and non-defaulted exposures.

² Includes mark-to-market related credit risk.

Loan impairment provisions

Provisions for loan impairment losses represent management's best estimate of the losses incurred in the loan portfolios as at the balance date. There are two components of Westpac's loan impairment provisions: individually assessed provisions (IAPs) and collectively assessed provisions (CAPs).

In determining IAPs, relevant considerations that have a bearing on the expected future cash flows are taken into account, for example:

- the business prospects of the customer;
- the realisable value of collateral;
- Westpac's position relative to other claimants;
- the reliability of customer information; and
- the likely cost and duration of the work-out process.

These judgements and estimates can change with time as new information becomes available or as work-out strategies evolve, resulting in revisions to the impairment provision as individual decisions are made.

CAPs are established on a portfolio basis taking into account:

- the level of arrears;
- collateral;
- past loss experience;
- expected defaults based on portfolio trends; and
- the economic environment.

The most significant factors in establishing these provisions are estimated loss rates and the related emergence periods. The future credit quality of these portfolios is subject to uncertainties that could cause actual credit losses to differ from reported loan impairment provisions. These uncertainties include:

- differences between the expected and actual economic environment;
- interest rates and unemployment levels;
- repayment behaviour; and
- bankruptcy rates.

Regulatory classification of loan impairment provisions

APS220 Credit Quality requires that Westpac report specific provisions and a General Reserve for Credit Loss (GRCL). All IAPs raised under AAS are classified as specific provisions. All CAPs raised under AAS are either classified into specific provisions or a GRCL.

A GRCL adjustment is made for the amount of GRCL that Westpac reports for regulatory purposes under APS220 in addition to provisions reported by Westpac under AAS. For capital adequacy purposes the GRCL adjustment is deducted from CET1. Eligible GRCL is included in Tier 2 capital.

¹ Average is based on exposures as at 30 September 2015, 30 June 2015, 31 March 2015, 31 December 2014, and 30 September 2014.

² Prior to 30 June 2015 off balance sheet market related exposure for specialised lending was included in the corporate sub-asset class.

³ EAD associated with securitisations is for the banking book only.

⁴ Average is based on exposures as at 31 March 2015, 31 December 2014, and 30 September 2014.

⁵ Average is based on exposures as at 30 September 2014, 30 June 2014, 31 March 2014, 31 December 2013 and 30 September 2013.

¹ Increase in exposure partly due to reclassification of certain conglomerate customers to mining. A review of the industry classification of entities has resulted in the reclassification of the industry code for a number of customers both into and out of the Mining classification as at 30 September 2015. This has increased the exposure for Mining by \$1.3 billion.

² Includes education, health & community services, cultural & recreational services and personal & other services.

³ Includes wholesale trade and retail trade.

⁴ Includes electricity, gas & water, and communication services.

¹ Includes education, health & community services, cultural & recreational services and personal & other services.

² Includes wholesale trade and retail trade.

³ Includes electricity, gas & water, and communication services.

⁴ All business lending under \$1 million secured by residential property has been moved to the small business category (\$2.0 billion of EAD and \$0.6 billion of RWA as at 31 March 2015). For periods prior to 31 March 2015, business lending secured by residential property was recorded under residential mortgages. All residential mortgage exposures which are not business lending are now reported under the retail lending industry classification to align with our treatment of other consumer exposures such as credit cards and personal loans.

Impaired and past due loans

The following tables disclose the crystallisation of credit risk as impairment and loss. Analysis of exposures 90 days past due not impaired, impaired loans, related provisions and actual losses are broken down by concentrations reflecting Westpac's asset categories, industry and geography.

Impaired and past due loans by portfolio

30 September 2015 \$m	Items past 90 days not impaired	Impaired Loans	Specific Provisions for Impaired Loans	Specific Provisions to Impaired Loans	Actual Losses for the 12 months ended

Portfolios subject to the standardised approach

This table presents exposures subject to the standardised approach.

As at 30 September 2015, exposures subject to the standardised approach and categorised by risk weight are primarily Westpac Pacific, the Lloyds asset finance portfolios, Asian retail exposures, the margin lending portfolio, self-managed superannuation fund and reverse mortgages portfolios and some other small portfolios. Mark-to-market related credit risk and qualifying central clearing counterparties exposure¹ is also included in the standardised approach.

30 September 2015 Risk Weight %	Total Exposure at Default \$m	Risk Weighted Assets \$m

Mark-to-market related credit risk	-	8,905
Total	18,430	23,652

¹ Portfolios subject to the standardised approach include exposures to qualifying central clearing counterparties used to clear derivative transactions. Derivative counterparty exposure and initial margin are risk weighted at 2%. Default fund contributions to qualifying central clearing counterparties are shown separately and are subject to higher risk weights.

Portfolios subject to supervisory risk-weights in the IRB approach

Exposures subject to supervisory risk-weights in the IRB approach include assets categorised as specialised lending, where a regulatory capital 'slotting' approach applies.

Westpac currently has property finance and project finance credit risk exposures categorised as specialised lending. The 'Credit Risk Management' section of this report describes the mapping of Westpac risk grades to both external rating equivalents and regulatory capital 'slots'.

Portfolios subject to IRB approaches

Westpac has classified its transaction-managed exposures by the external credit rating to which the internally assigned credit risk grade aligns, as outlined in the 'Credit Risk Management' section of this report. Westpac's internal rating system consists of more risk grades than does the range of external grades, and as a result PD will vary from portfolio to portfolio for the same external grade. Westpac's program-managed exposures are classified by PD band. The average PD within a band likewise varies from portfolio to portfolio.

For non-defaulted exposures, regulatory expected loss is defined as the product of PD, LGD and EAD. For defaulted exposures, regulatory expected loss is based upon best estimates of loss. Expected loss is calculated at the facility level and then aggregated. However, multiplying the aggregates of the PD, LGD and EAD, as reported in the tables below (e.g. \$139,178 million x 0.86% x 46%), does not always equal the aggregate regulatory expected loss (\$530 million) because the product of two averages does not equal the average of a product.

¹ Outstandings are balances that were drawn down as at the reporting date and include certain off-balance sheet items.

² Committed undrawn balances are committed exposures that were not drawn down as at the reporting date.

Credit Quality

The improvement in the quality of the portfolio continued through Full Year 2015, with a further reduction in stressed assets, the emergence of new problem facilities remaining low, and the additional resolution and work-out of impaired facilities. Impairment charges and actual losses are low, with provisioning levels broadly maintained.

The institutional and commercial segments continue to perform well as customers remain cautious and protective of their balance sheets. In the consumer sector, unsecured consumer delinquencies and write-off directs have trended higher over the Full Year 2015 as unemployment has increased. Residential mortgage asset quality and actual losses have remained low supported by the strong property market.

Regulatory loss estimates and actual losses

The table below compares regulatory credit risk estimates used in the calculation of risk weighted assets to the average of actual outcomes observed since the time of Advanced IRB accreditation for each portfolio.

Predicted parameters represent average internally predicted long-run probabilities of default for non-defaulted obligors at the start of each year, as well as downturn estimates of loss (or the regulatory minimum where required). They are averaged using data from the financial years beginning at the time of Advanced IRB accreditation (2008 for most portfolios) and compared to observed outcomes over the same period.¹

Predicted parameters are updated annually and utilise observed outcomes from prior periods as a key input.

In order to appropriately include the most recent half-year period, its outcomes have been annualised.

Default rates

At the start of each year, a predicted default probability is assigned to all non-defaulted obligors. This is averaged over the portfolio and reported as the predicted default rate. This is compared to the actual default rate for the year. Both predicted and observed annual default rates are then averaged over the observation period.

Loss Given Default (LGD)

The LGD analysis excludes recent defaults in order to allow sufficient time for the full workout of the facility and hence an accurate LGD to be determined. The workout period varies by portfolio: a two year workout period is assumed for transaction-managed and residential mortgage lending; and a one year period for other program-managed portfolios.

Exposure at Default (EAD)

The EAD variance compares the observed EAD to the predicted EAD one year prior to default. For transaction-managed portfolios, predicted EAD is currently mandated to be 100% of committed exposures. The observed EAD is averaged for all obligors that defaulted over the observation period.

30 September 2015 \$m	Regulatory		Default rate		Loss Given Default		Observed EAD
	Expected	Loss ²	Predicted	Observed	Predicted	Observed	variance to Predicted ³
Corporate	754		2.24%	1.17%	50%	40%	(24%)
Business lending	700		2.25%	1.55%	34%	18%	(12%)

This section describes the way in which Westpac reduces its credit risk by using financial collateral, guarantees or credit derivatives for Corporate, Sovereign and Bank asset classes.

Approach

Westpac recognises credit risk mitigation only when formal legal documentation is held that establishes Westpac's direct, irrevocable and unconditional recourse to the collateral or to an unrelated credit risk mitigation provider. The minimum standards to be met so that credit risk mitigation can be recognised are embodied in Westpac's credit rules and policies. All proposals for risk mitigation require a formal submission confirming compliance with these standards, for approval by an authorised credit officer. Authorised credit officer approval is also required for existing risk mitigation to be discontinued or withdrawn.

The amount of credit risk mitigation recognised is the face value of the mitigation instrument, which is adjusted by the application of discounts for any maturity and/or currency mismatch with the underlying obligation, so that a discounted amount is recognised when calculating the residual exposure after mitigation.

For regulatory capital purposes Westpac addresses credit risk mitigation as follows:

- exposures secured by cash, eligible financial collateral or where protection is bought via credit linked notes, provided the proceeds are invested in either cash or eligible financial collateral, are included at the gross value, with risk weighted assets for the portion thus secured calculated by applying a 5% LGD¹;
- exposures that are mitigated by way of eligible guarantees, standby letters of credit or similar instruments, where Westpac has direct recourse to an unrelated third party on default or non-payment by the customer, or credit protection bought via credit default swaps where Westpac is entitled to recover either full principal or credit losses on occurrence of defined credit events, are treated under double default rules where the protection provider is a financial firm rated A/A2 or better; and
- exposures that are mitigated by way of guarantees, letters of credit, credit default swaps or similar instruments, where the eligibility criteria for double default treatment are not met, are treated under the substitution approach.

Structure and organisation

Westpac Institutional Bank is responsible for managing the overall risk in Westpac's corporate, sovereign and bank credit portfolios, and uses a variety of instruments, including securitisation and single name credit default swaps, to manage loan and counterparty risk. Westpac Institutional Bank has a dedicated portfolio trading desk with the specific mandate of actively monitoring the underlying exposure and the offsetting hedge book.

Risk reporting

Monthly reports are issued, which detail risk mitigated facilities where the mitigation instruments mature within 30 to 90 days. An independent operational unit supervises this process to ensure that the relevant business and credit risk management units' decisions are taken and actions implemented in a timely fashion.

Specific reporting is maintained and monitored on the matching of hedges with underlying facilities, with any adjustments to hedges (e.g. unwinds or extensions) managed dynamically.

Netting

Risk reduction by way of current account set-offs is recognised for exposures to creditworthy customers domiciled in Australia and New Zealand only. Customers are required to enter into formal agreements giving Westpac the unfettered right to set-off gross credit and debit balances in their nominated accounts to determine Westpac's net exposure within each of these two jurisdictions. Cross-border set-offs are not permitted.

Close-out netting is undertaken for off-balance sheet financial market transactions with counterparties with whom Westpac has entered into master netting agreements which allow such netting in specified jurisdictions. Close-out netting effectively aggregates pre-settlement risk exposure at time of default, thus reducing overall exposure.

Collateral valuation and management

Westpac revalues financial markets and associated collateral positions on a daily basis to monitor the net risk position, and has formal processes in place so that calls for collateral top-up or exposure reduction are made promptly. An independent operational unit has responsibility for monitoring these positions. The collateralisation arrangements are documented via the Credit Support Annex of the International Swaps and Derivatives Association (ISDA) master agreement for derivatives transactions and Global Master Repurchase Agreement (GMRA) for repurchase transactions and Clearing Agreements for cleared trades.

¹ Excludes collateralised derivative transactions.

Types of collateral taken

Westpac recognises the following as eligible collateral for credit risk mitigation by way of risk reduction:

- cash (primarily in Australian dollars (AUD), New Zealand dollars (NZD), US dollars (USD), Canadian dollars (CAD), British pounds (GBP), or Euro (EUR));
- bonds issued by Australian Commonwealth, State and Territory governments or their Public Sector Enterprises, provided these attract a zero risk-weighting under APS112;
- securities issued by other specified AA-/Aa3 or better rated sovereign governments; and
- credit-linked notes (provided the proceeds are invested in cash or other eligible collateral described above).

Guarantor/credit derivative counterparties

For mitigation by risk transfer, Westpac only recognises unconditional irrevocable guarantees or standby letters of credit issued by, or eligible credit derivative protection bought from, the following entities provided they are not related to the underlying obligor:

- sovereign entities;
- public sector entities in Australia and New Zealand;
- authorised deposit taking institutions and overseas banks with a minimum risk grade equivalent of A-/A3; and
- other entities with a minimum risk grade equivalent of A-/A3.

Market and/or credit risk concentrations

When Westpac uses credit risk mitigation techniques to reduce counterparty exposure, limits are applied to both gross (i.e. pre-mitigation) and net exposure.

Furthermore, exposure is recorded against the provider of any credit risk mitigation and a limit framework prevents excessive concentration to such counterparties.

All exposures to risk transfer counterparties are separately approved under Westpac's usual credit approval process, with the amount and tenor of mitigation recorded against the counterparty in Westpac's exposure management systems. The credit quality of mitigation providers is reviewed regularly in accordance with Westpac's usual periodic review processes.

Market risks arising from credit risk mitigation activities are managed similarly to market risks arising from any other trading activities.

These risks are managed under either the market risk banking book or trading book frameworks as appropriate.

¹ Impact of credit mitigation under the substitution approach.

² The 'Total before mitigation' and 'Impact of credit mitigation' amounts for 31 March 2015 and 30 September 2014 have been restated following data enhancements made during the period. There is no impact to exposure at default or risk weighted assets for the periods.

This section describes Westpac's exposure to credit risk arising from derivative and treasury products.

Approach

Westpac's process for managing derivatives and counterparty credit risk is based on its assessment of the potential future credit risk Westpac is exposed to when dealing in derivatives products and securities financing transactions. Westpac simulates future market rates by imposing shocks on market prices and rates, and assessing the effect these shocks have on the mark-to-market value of Westpac's positions. These simulated exposure numbers are then checked against pre-settlement risk limits that are set at the counterparty level.

Structure and organisation

The Financial Markets Credit management team is charged with managing the counterparty credit exposure arising from derivatives and treasury products.

Risk reporting

Westpac actively reassesses and manages the counterparty credit exposure arising from derivatives business. A daily simulation of potential future counterparty credit exposure taking into account movements in market rates is conducted. This simulation quantifies credit exposure using the Derivative Risk Equivalent (DRE) methodology and exposure is loaded into a credit limit management system. Limit excesses are reported to credit managers and actioned within strict timeframes.

Market related credit risk

There are two components to the regulatory capital requirements for credit risk arising from derivative products:

- capital to absorb losses arising from the default of derivative counterparties. This has been included as part of the "IRB Approach" credit capital requirements since Westpac's Basel II accreditation; and
- capital to absorb losses arising from mark-to-market valuation movements resulting from changes in the credit quality of derivative counterparties. These valuation movements are referred to as credit valuation adjustments and this risk is sometimes labelled as credit valuation adjustment or CVA risk. Westpac refers to this requirement as mark-to-market related credit risk.

Risk mitigation

Mitigation is achieved in a number of ways:

- the limit system monitors for excesses of the pre-determined limits, with any excesses being immediately notified to credit officers;
- Westpac has collateral agreements with its largest counterparties. The market value of the counterparty's portfolio is used to recalculate the credit position at each end of day, with collateral being called for when certain pre-set limits are met; and
- credit derivatives are used to mitigate credit exposure against certain counterparties.

In addition, the following approaches are also used as appropriate to mitigate credit risk:

- incorporating right-to-break in Westpac's contracts, effectively reducing the tenor of the risk;
- signing netting agreements, thus allowing the exposure across a portfolio of trades to be netted;
- regular marking to market and settling of the foreign exchange components of foreign exchange reset contracts; and
- downgrade triggers in documentation that, if breached, require the counterparty to provide collateral.

Counterparty derivative exposures and limits

The risk management methodology for counterparty derivatives exposures is similar to the credit methodology for transaction-managed loans. The main difference is in the estimation of the exposure for derivatives which is based on the DRE methodology. DRE is a credit exposure measure for derivative trades which is calibrated to a 'loan-equivalent' exposure.

Counterparty credit limits are approved on an uncommitted and unadvised basis by authorised credit officers. This follows an evaluation of each counterparty's credit worthiness and establishing an agreed credit risk appetite for the nature and extent of prospective business.

Wrong-way risk exposures¹

Westpac defines wrong-way risk as exposure to a counterparty which is adversely correlated with the credit quality of that counterparty. With respect to credit derivatives, wrong-way risk refers to credit protection purchased from a counterparty highly correlated to the reference obligation.

Wrong-way risk exposures using credit derivatives are controlled by only buying protection from highly rated counterparties. These transactions are assessed by an authorised credit officer who has the right to decline any transaction where they feel there is an unacceptably high correlation between the ability to perform under the trade and the performance of the underlying counterparty.

Consequences of a downgrade in Westpac's credit rating

Where an outright threshold and minimum transfer amount are agreed, there will not be any impact on the amount of collateral posted by Westpac in the event of a credit rating downgrade. Where the threshold and minimum transfer amount are tiered according to credit rating, the impact of Westpac being downgraded below its current credit rating would be: for a one notch downgrade, postings of \$99 million; while for a two notch downgrade, postings would be \$139 million.

Counterparty credit risk summary**30 September 2015****\$m**

¹ Credit rating downgrade postings are cumulative.

A securitisation is a financial structure where the cash flow from a pool of assets is used to service obligations to at least two different tranches or classes of creditors (typically holders of debt securities), with each class or tranche reflecting a different degree of credit risk (i.e. one class of creditors is entitled to receive payments from the pool before another class of creditors).

Securitisation transactions are generally grouped into two broad categories:

- traditional or true sale securitisations, which involve the transfer of ownership of the underlying asset pool to a third party; and
- synthetic transactions, where the ownership of the pool remains with the originator and only the credit risk of the pool is transferred to a third party, using credit derivatives or guarantees.

Covered bond transactions, in which bonds issued by Westpac are guaranteed by assets held in a special purpose vehicle, are not considered to be securitisation transactions.

Approach

Westpac's involvement in securitisation activities ranges from a seller of its own assets to an investor in third-party transactions and includes transaction arrangement, the provision of securitisation services and funding for clients, including clients requiring access to capital markets.

Securitisation of Westpac originated assets - Securitisation is a funding, liquidity and capital management tool. It allows Westpac the ability to liquefy a pool of assets and increase Westpac's wholesale funding capacity. Westpac may provide arm's length facilities to the securitisation vehicles. The facilities entered into typically include the provision of liquidity, funding, underwriting and derivative contracts.

Westpac has entered into on balance sheet securitisation transactions whereby loans originated by Westpac are transformed into stocks of saleable mortgage backed securities and held in the originating bank's liquid asset portfolio. These 'self securitisations' do not change risk weighted assets.¹ No securitisation transactions for Westpac originated assets are classified as a resecuritisation.

Securitisation in the management of Westpac's credit portfolio - Westpac uses securitisation, including portfolio credit default swaps, to manage its corporate and institutional loan and counterparty credit risk portfolios. Single name credit default swaps are not treated as securitisations but as credit risk mitigation facilities. Transactions are entered into to manage counterparty credit risk or concentration risks.

Provision of securitisation services, including funding and management of conduit vehicles - Westpac provides services to clients wishing to access asset-backed financing through securitisation. Those services include access to the Asset Backed Commercial Paper Market through Waratah and Crusade conduits, the Westpac-sponsored securitisation conduits; the provision of warehouse and term funding of securitised assets on Westpac's balance sheet; and arranging Asset-Backed Bond issues. Westpac provides facilities to Waratah and the Crusade securitisation conduit including liquidity, funding, underwriting, credit enhancement and derivative contracts. Securitisation facilities provided by Westpac include resecuritisation exposures which are securitisation exposures in which the risk associated with an underlying pool of exposures is tranching and at least one of the underlying exposures is itself a securitisation exposure.

Westpac's role in the securitisation process

Securitisation activity	Role played by Westpac
Securitisation of Westpac originated assets	<ul style="list-style-type: none"> • Arranger • Asset originator • Bond distributor • Facility provider • Note holder • Trust manager • Swap provider • Servicer
Securitisation in the management of Westpac's credit portfolio	<ul style="list-style-type: none"> • Hedger - protection purchaser • Investor - protection seller • Investor - purchaser of securitisation exposures
Provision of securitisation services including funding and management of conduit vehicles	<ul style="list-style-type: none"> • Arranger • Bond distributor • Credit enhancement provider • Funder • Liquidity facility provider • Swap counterparty • Servicer

¹ The credit exposures of the underlying loans are measured in accordance with APS113.

Key Objectives

Securitisation of Westpac originated assets - The securitisation of Westpac's own assets provides funding diversity, and is a core tool of liquidity management.

Securitisation in the management of Westpac's credit portfolio - Westpac acts as principal in transactions and will buy and sell protection in order to meet its portfolio management objectives. Westpac also purchases securitisation exposures in order to earn income. All securitisation activity must follow Westpac's credit approval processes.

Provision of securitisation services including funding and management of conduit vehicles - Westpac receives market-based fees in return for its services as servicer, swap counterparty, arranger and facility provider and program fees, interest margins and bond distribution fees on warehouse and term funding facilities.

Structure and organisation

Securitisation of Westpac originated assets - Westpac's Treasury operations are responsible for all Westpac originated securitisation activity including funding, liquidity and capital management.

Securitisation in the management of Westpac's credit portfolio - Westpac's exposure arising from securitisation, including portfolio hedging, is managed by Westpac Institutional Bank (WIB) and integrated within Westpac's standard risk reporting and management systems.

Provision of securitisation services including funding and management of conduit vehicles - These services are provided by WIB and include the provision of liquidity, credit enhancement, funding and derivative facilities and servicer and arranger services.

Risk reporting

Credit exposure - Funding, liquidity, credit enhancement and redraw facilities, swap arrangements and counterparty exposures are captured and monitored in key source systems along with other facilities/derivatives entered into by Westpac.

Operational risk exposure - The operational risk review process for Westpac includes the identification of risks, controls and key performance indicators in relation to all securitisation activity and services provided by Westpac or any of its subsidiaries.

Market risk exposure - Exposures arising from transactions with securitisation conduits and other counterparties are captured as part of Westpac's traded and non-traded market risk reporting and limit management framework.

Liquidity risk exposure - Exposure to, and the impact of, securitisation transactions are managed under the Liquidity Risk Management Framework and are integrated into routine reporting for capital and liquidity positions, net interest margin analysis, balance sheet forecasting and funding scenario testing. The annual funding plan incorporates consideration of overall liquidity risk limits and the securitisation of Westpac originated assets.

Risk mitigation

Securitisation of Westpac originated assets - The interest rate and basis risks generated by Westpac's hedging arrangements to each securitisation trust are captured and managed within Westpac's asset and liability management framework. The liquidity risk generated by Westpac's liquidity and redraw facilities to each securitisation trust is captured and managed in accordance with Westpac's liquidity management policies along with all other contingent liquidity facilities.

Securitisation in the management of Westpac's credit portfolio - Transactions are approved in accordance with Westpac's credit risk mitigation policy (see pages 51 and 52).

Provision of securitisation services including funding and management of conduit vehicles - All securitisation transactions are approved within the context of a securitisation credit policy that sets detailed transaction-specific guidelines that regulate servicer counterparty risk appetite, transaction tenor, asset class, third party credit support and portfolio quality. This policy is applied in conjunction with other credit and market risk policies that govern the provision of derivative and other services that support securitisation transactions. In particular, credit hedging transactions are subject to credit risk mitigation policy (see pages 51 and 52). Any interest rate or currency hedging is subject to counterparty credit risk management (see pages 54 and 55) and market risk management (see pages 67 and 68) policies and processes.

Regulatory capital approaches

The regulatory capital treatment of all securitisation exposures is undertaken in accordance with APS120.

Consistent with APS120 the approaches employed include the Ratings-Based Approach (RBA), where APRA provides risk-weights that are matched to external credit ratings, and the Internal Assessment Approach (IAA), which largely mirrors the RBA. The Supervisory Formula (SF), which determines a capital charge based on the attributes of the securitisation structure through an industry standard formula with pre-determined parameters, is employed under specific conditions where the RBA and IAA are deemed inappropriate.

Securitisation of Westpac originated assets - The assets sold by Westpac to a securitisation trust are excluded from Westpac's calculation of credit risk weighted assets if capital relief is sought and the requirements of APS120 are satisfied¹. Westpac cannot rely on external rating when risk weighting its exposure to these trusts and must use the Supervisory Formula approach instead.

In instances where insufficient risk transfer is achieved by the transaction for regulatory purposes, the capital calculation is performed on the underlying asset pool while the facilities provided to such securitisation vehicles do not attract regulatory capital charges.

Securitisation in the management of Westpac's credit portfolio - Unless Westpac makes an election under APS120, the underlying assets subject to synthetic securitisation are excluded from Westpac's calculation of credit risk weighted assets. They are replaced with the credit risk weight of the applicable securitisation instrument, usually credit default swaps or underlying cash collateral. Westpac applies the RBA and the SF when determining regulatory capital treatments for securitisation exposures arising from the management of its credit portfolio.

Provision of securitisation services including funding and management of conduit services - Westpac uses the RBA and the IAA methodology when determining regulatory capital requirements for the facilities associated with the provision of securitisation services to the Waratah securitisation conduit and facilities for the provision of warehouse and term funding of securitised assets on Westpac's balance sheet. Regulatory capital for the Crusade securitisation conduit is determined in accordance with APS113.

The regulatory capital treatment of derivatives for securitisation exposures is currently undertaken in accordance with APS113. The difference in regulatory capital calculations using APS120 and APS113 is immaterial.

The External Credit Assessment Institutions that can be used by Westpac for resecuritisations are Standard & Poor's, Moody's and Fitch.

Westpac's accounting policies for securitisation activities

Securitisation of Westpac originated assets - The assets sold by Westpac to a securitisation trust remain on Westpac's balance sheet for accounting purposes.

Securitisation in the management of Westpac's credit portfolio - For risk mitigation using synthetic securitisation, the underlying assets remain on Westpac's balance sheet for accounting purposes. The accounting treatment of the assets will depend on their nature. They could include loans and receivables, available for sale securities or derivatives. The most common form of synthetic securitisation is via a credit default swap, which is treated as a derivative and recognised in the profit and loss statement at fair value.

For investment in securitisation exposures, if the instrument includes a credit default swap, the exposure will be fair valued through the profit and loss statement. Other securitisation exposures will be fair valued through the balance sheet unless Westpac makes an election at the time of purchase to fair value through the profit and loss statement.

Provision of securitisation services including funding and management of conduit vehicles - Fee income from these services is recognised on an accrual basis. Liquidity and funding facilities are treated as commitments to provide finance, with fee and margin income recognised on an accrual basis. Warehouse and term funding facilities are treated as loans.

¹ Including the requirements to achieve capital relief.

Banking book summary of assets securitised by Westpac

This table shows outstanding Banking book securitisation assets and assets intended to be securitised¹ for Westpac originated assets by underlying asset type. It includes the amount of impaired and past due assets, along with any losses recognised by Westpac during the current period.

Securitized assets are held in securitisation trusts. Trusts which meet requirements to achieve capital relief do not form part of the Level 2 consolidated group. Self securitisation trusts remain consolidated at Level 2 and the assets transferred to these trusts are risk weighted in accordance with APS113.

Banking book securitisation subject to early amortisation treatment

There is no securitisation exposure in the Banking book that is subject to early amortisation treatment for 30 September 2015.

Banking book resecuritisation exposure subject to credit risk mitigation (CRM)

As at 30 September 2015 resecuritisation exposures eligible for CRM was \$959 million with nil CRM taken against these exposures (\$1,579 million eligible for CRM and nil CRM taken as at 31 March 2015).

Banking book resecuritisation exposure to guarantors

Westpac has no third party guarantors providing guarantees for securitised assets, principal or interest repayments for 30 September 2015.

Trading book summary of assets securitised by Westpac

As at 30 September 2015 there was \$14 million in outstanding securitisation exposures for Westpac originated assets held in the Trading book (\$21 million as at 31 March 2015).

¹ Excludes securitisation start-up costs.

Trading book summary of total Westpac sponsored third party assets securitised

There are no third party assets held in the Trading book where Westpac is responsible for the establishment of the securitisation program and subsequent management as at 30 September 2015.

Trading book summary of securitisation activity by asset type

There is no originated securitisation activity in the trading book for the 12 months to 30 September 2015.

Trading book aggregated amount of exposure securitised by Westpac and subject to APS116 Capital Adequacy: Market Risk

This table shows Westpac originated outstanding securitisation exposure held in the Trading book. These exposures are risk weighted under APS116.

Trading book securitisation exposure subject to specific risk

There is no Trading book securitisation exposure subject to specific risk for 30 September 2015.

Trading book securitisation exposure subject to APS120 Securitisation specific risk by risk weight band

There is no Trading book securitisation exposure subject to APS120 specific risk for 30 September 2015.

Trading book capital requirements for securitisation exposures subject to internal models approach (IMA) by risk classification

There is no Trading book capital requirement for securitisation subject to IMA for 30 September 2015.

¹ EAD associated with Trading book securitisation is not included in the EAD by Major Type on page 26. Trading book securitisation exposure is captured and risk weighted under APS116.

Trading book capital requirements for securitisation regulatory capital approaches by risk weight band

There is no Trading book capital requirement for securitisation subject to regulatory capital approaches for 30 September 2015.

Trading book securitisation exposure deducted from capital

There is no Trading book capital deduction for 30 September 2015.

Trading book securitisation subject to early amortisation treatment

There is no securitisation exposure in the Trading book that is subject to early amortisation treatment for 30 September 2015.

Trading book resecuritisation exposure subject to CRM

Westpac has no resecuritisation exposure subject to CRM at 30 September 2015.

Trading book resecuritisation by guarantor creditworthiness

Westpac has no third party guarantors providing guarantees for securitised assets, principal or interest repayments for 30 September 2015.

Westpac's exposure to market risk arises out of its Financial Markets and Treasury trading activities. This is quantified for regulatory capital purposes using both the standard method and the internal model approach, details of which are provided below.

Approach

Trading activities are controlled by a Board-approved market risk framework that incorporates a Board-approved value at risk (VaR) limit. VaR is the primary mechanism for measuring and controlling market risk. Market risk is managed using VaR and structural risk limits (including volume limits and basis point value limits) in conjunction with scenario analysis and stress testing. Market risk limits are allocated to business management based upon business strategies and experience, in addition to the consideration of market liquidity and concentration risk.

All trades are fair valued daily using rates that have been captured automatically from an independent market data source that has been approved by the WIB Revaluation Committee (WIBRC). Where there is no source of independent rates, data will either be derived using a methodology approved by the WIBRC or sourced from dealer contributions. Where dealer-sourced rates/inputs are applied the WIBRC will meet monthly to review the results of independent price verification performed by the valuation function. In addition, valuation adjustments will be made as deductions to Common Equity Tier 1 Capital for exposures which may not be captured through the fair valuation framework.

The current adjustment considers the impact of the volatility smile in foreign exchange exotic options based on an assessment of the average of at-the-money and non-at-the money volatilities. The resulting adjustment is not material. Rates that have limited independent sources are reviewed at least on a monthly basis.

Financial Markets' trading activity represents dealings that encompass book running and distribution activity. The types of market risk arising from these activities include interest rate, foreign exchange, commodity, equity price, credit spread and volatility risk.

Treasury's trading activity represents dealings that include the management of interest rate, foreign exchange and credit spread risks associated with the wholesale funding book, liquid asset portfolios and foreign exchange repatriations. Treasury also manage banking book risk which is discussed in the Interest Rate Risk in the Banking Book section.

VaR limits

Market risk arising from trading book activities is primarily measured using VaR based on an historical simulation methodology. Westpac estimates VaR as the potential loss in earnings from adverse market movements and is calculated over a 1-day time horizon to a 99% confidence level using 1 year of historical data. VaR takes account of all material market variables that may cause a change in the value of the trading portfolio, including interest rates, foreign exchange rates, price changes, volatility, and the correlation between these variables.

In addition to the Board approved market risk VaR limit for trading activities, RISKCO has approved separate VaR sub-limits for the trading activities of Financial Markets and Treasury.

Backtesting

Daily backtesting of VaR results is performed to ensure that model integrity is maintained. A review of both the actual and potential profit and loss outcomes is also undertaken to monitor any skew created by the historical data.

Stress testing

Daily stress testing against pre-determined scenarios is carried out to analyse potential losses beyond the 99% confidence level. An escalation framework around selective stress tests is approved by RISKCO.

Profit and loss notification framework

The BRCC has approved a profit and loss notification framework. Included in this framework are levels of escalation in accordance with the size of the profit or loss. Triggers are applied to both a 1-day and a rolling 20-day cumulative total.

Risk reporting

Daily monitoring of current exposure and limit utilisation is conducted independently by risk managers in the Financial Markets & Treasury Risk (FMTR) team, who monitor market risk exposures against VaR and structural limits. Daily VaR position reports are produced by risk type, by product lines and by geographic region. These are supplemented by structural risk reporting, advice of profit and loss trigger levels and stress test escalation trigger points. Model accreditation has been granted by APRA for the use of an internal model for the determination of regulatory capital for the key classes of interest rate (general market), foreign exchange, commodity and equity risks (including equity specific risk). Under the model, regulatory capital is derived from both the current VaR window (market data is based upon the most recent 12 months of historical data) and a Stressed VaR window (12

months of market data that includes a period of significant financial stress), where these VaR measures are calculated as a 10-day, 99th percentile, one-tailed confidence interval. Specific risk refers to the variations in individual security prices that cannot be explained by general market movements, and event and default risk. Interest rate specific risk capital (specific issuer risk) is calculated using the Standard method and is added to the VaR regulatory capital measure.

Risk mitigation

Market risk positions are managed by the trading desks consistent with delegated trading and product authorities. Risks are consolidated into portfolios based on product and risk type. Risk management is carried out by qualified personnel with varying levels of seniority commensurate with the nature and scale of market risks under management.

The following controls allow monitoring by management:

- trading authorities and responsibilities are clearly delineated at all levels;
- a structured system of limits and reporting of exposures;
- all new products and significant product variations undergo a rigorous approval process to identify business risks prior to launch;
- models that are used to determine risk or profit and loss for Westpac's accounts are independently reviewed;
- duties are segregated so that employees involved in the origination, processing and valuation of transactions operate under separate reporting lines, minimising the opportunity for collusion; and
- legal counsel approves documentation for compliance with relevant laws and regulations.

In addition, internal audit independently reviews compliance with policies, procedures and limits.

Market Risk regulatory capital and risk weighted assets

The Internal model approach uses VaR and Stressed VaR, while the Standard approach is used for interest rate specific risk.

Back-testing results

The following graph gives a comparison of actual profit and loss to VaR over the 6 months ended 30 September 2015.

Traded Risk: Actual Profit and Loss vs. VaR
01 April 2015 to 30 September 2015

Each point on the graph represents 1 day's trading profit or loss. This result is placed on the graph relative to the associated VaR utilisation. The downward sloping line represents the point where a loss is equal to VaR utilisation. Any point below this line represents a back-test exception (i.e. where the loss is greater than the VaR).

¹ The Highs (Lows) by risk types will likely be determined by different days in the period. As such, the sum of these figures will not reflect the High (Low) net market risk, which reflects the highest (lowest) aggregate risk position in the period.

Operational risk is defined at Westpac as the risk of loss resulting from inadequate or failed internal processes, people and systems or from external events. This definition includes legal and regulatory risk but excludes strategic and reputation risk. Westpac's operational risk definition is aligned to APS115 Capital Adequacy: Advanced Measurement Approaches to Operational Risk.

Approach

Westpac has been accredited to use the AMA in accordance with APS115.¹ Westpac's operational risk is measured and managed in accordance with the policies and processes defined in its Operational Risk Management Framework.

Westpac's Operational Risk Management Framework

The Operational Risk Management Framework outlines a consistent approach to the:

- identification, measurement and management of operational risks that may impede Westpac's ability to achieve its strategic objectives and vision;
- identification and escalation of operational risk and compliance incidents and issues in order to minimise potential financial losses, reputational damage and shareholder, community, employee and regulatory impacts; and
- calculation and allocation of operational risk capital.

The key components of Westpac's operational risk management framework are listed below:

Governance - The governance structure provides clearly defined roles and responsibilities for overseeing and reviewing operational risk exposure and management.

The Board and BRCC are supported by committees including RISKCO that monitor operational risk profiles and the effectiveness of operational risk management practices, including operational risk capital.

Risk and Control Management (RCM) - RCM is a forward-looking tool used to manage Westpac's operational risk profile by identifying and assessing key operational risks and the adequacy of controls, with management action planning to reduce risks that are outside risk appetite or where enhancements in the associated control environment are required.

Key Indicators (KIs) - The framework defines requirements and processes for KIs, which are objective measures used by management to monitor the operational risk and control environment.

Incident Management - Incident management involves identifying operational risk incidents, capturing them in the central operational risk system and escalating them to appropriate levels of management. Early identification and ownership supports the ability to minimise any immediate impacts of the incidents, address the root causes, and devise and monitor management actions required to strengthen the control environment.

Data - The framework includes principles and processes to ensure the integrity of operational risk data used to support management decision-making and calculate and allocate capital. The principles apply to the governance, input and capture, reconciliation and validation, correction, reporting and storage of operational risk data. Operational risk data is subject to independent validation on a regular basis.

Scenario Analysis - Scenario analysis is used to assess the impacts of extreme but plausible loss events on Westpac and is an input to the calculation of operational risk capital.

Operational Risk of Change Programs - The framework defines requirements for understanding and managing the operational risk implications of projects.

Reporting - Regular reporting of operational risk information to governance bodies and senior management is used to support timely and proactive management of operational risk and enable transparent and formal oversight of the risk and control environment.

Control Assurance - The framework defines the process and requirements for providing assurance over the effectiveness of the operational risk control environment, including the testing and assessment of the design and operating effectiveness of controls.

¹ APRA approved the AMA approach for the calculation of Lloyds operational risk RWA from December 2014. For periods prior to December 2014 Westpac applied the partial use approach, as approved by APRA, and the business acquired from Lloyds was measured under the Standardised approach as defined under APS114 Capital Adequacy: Standardised Approach to Operational Risk.

AMA capital model overview

Operational risk regulatory capital is calculated on a quarterly basis. The capital model is reviewed annually to re-assess the appropriateness of the model framework, methodology, assumptions and parameters in light of changes in the operational risk profile and industry developments.

Westpac's operational risk capital is based on three data sources:

- Internal Loss Data – operational risk losses experienced by Westpac;
- External Loss Data – operational risk losses experienced by other financial institutions; and
- Scenario Data – potential losses from extreme but plausible events relevant to Westpac.

These data sources together represent the internal and external operational risk profile, across the spectrum of operational risk losses, from both historical and forward-looking perspectives. The model combines these data sources to produce a loss distribution.

Expected loss offsets and risk mitigation

No adjustments or deductions are currently made to Westpac's measurement of operational risk regulatory capital for the mitigating impacts of insurance or expected operational risk losses.

Operational Risk regulatory capital and risk weighted assets

\$m	30 September 2015	31 March 2015	30 September 2014
Advanced measurement approach	2,481	2,411	2,308
Standardised approach	-	-	39
Total capital required	2,481	2,411	2,347
Risk weighted assets	31,010	30,136	29,340

Equity risk is defined as the potential for financial loss arising from movements in equity values. The disclosures in this section exclude investments in equities made by Westpac subsidiaries outside the regulatory Level 2 group.

Structure and organisation

Any changes to the portfolio and transactional limits for Westpac's direct equity investments are approved under delegated authority from the Westpac Board. The BRCC also approves the Equity Risk Management framework.

Approach

Westpac has established a comprehensive set of policies defining the management of equity risk. These policies are reviewed and approved annually.

Risk mitigation

Westpac does not use financial instruments to mitigate its exposure to equities in the banking book.

Banking book positions

Equity underwriting and warehousing risk - As a financial intermediary Westpac underwrites listed and unlisted equities. Equity warehousing activities require the acquisition of assets in anticipation of refinancing through a combination of senior, mezzanine and capital market debt and listed, unlisted and privately placed equity.

Investment securities - Westpac undertakes, as part of the ordinary course of business, certain investments in strategic equity holdings and over time the nature of underlying investments will vary.

Measurement of equity securities - Equity securities are generally carried at their fair value. Fair value for equities that have a quoted market price (in an active market) is determined based upon current bid prices. If a market for a financial asset is not active, fair value is determined based upon a valuation technique. This includes the use of recent arms-length transactions, discounted cash flow analysis, option pricing models and other valuation techniques commonly used by market participants to price similar instruments. In the event that the fair value of an unlisted security cannot be measured reliably, these investments are measured at cost.

Where the investment is held for long term strategic purposes, these investments are accounted for either as available for sale, with changes in fair value being recognised in equity, at fair value through profit and loss, or equity accounted for and recognised as a share in associates.

Other related matters

- For the periods reported the book value of certain unlisted investments are measured at cost because the fair value cannot be reliably measured. These investments represent minority interests in companies for which active markets do not exist and quote prices are not available. For all other equity exposures book value equals fair value.
- Fair value should not differ to the listed stock price. Should a listed stock price not be available, it is estimated using the techniques referred to above.

Risk reporting

Westpac manages equity risk in two ways, VaR limits and investment limits:

- A VaR limit (in conjunction with structural limits) is used to manage equity risk in the equity trading business in Financial Markets. This limit is a sub-limit of the BRCC approved VaR limit for Financial Markets trading activities. Equity trading is overseen by the independent Financial Markets and Treasury Risk function applying the same controls used for monitoring other trading book activities in Financial Markets and Treasury; and
- Investment exposures are reported quarterly.

At 30 September 2015 the carrying value of Westpac's investment in BT Investment Management Limited (BTIM) was \$756 million, and the fair value was \$868 million.

Interest Rate Risk in the Banking Book (IRRBB) is the risk to interest income arising from a mismatch between the duration of assets and liabilities that arises in the normal course of banking activities.

Approach

The banking book activities that give rise to market risk include lending activities, balance sheet funding and capital management. Interest rate risk, currency risk and funding and liquidity risk are inherent in these activities. Treasury's Asset & Liability Management (ALM) unit is responsible for managing market risk arising from Westpac's banking book activity.

All material regions, business lines and legal entities are included in Westpac's IRRBB framework.

Asset and liability management

ALM manages the structural interest rate mismatch associated with the transfer priced balance sheet, including the investment of Westpac's capital to its agreed benchmark duration. A key risk management objective is to achieve reasonable stability of Net Interest Income (NII) over time. These activities are performed under the oversight of RISKCO and the FMTR unit.

Net Interest Income sensitivity

NII sensitivity is managed in terms of the net interest income-at-risk (NaR) modelled over a three year time horizon to a 99% confidence interval for movements in wholesale market interest rates. A simulation model is used to calculate Westpac's potential NaR. The NII simulation framework combines the underlying statement of financial position data with assumptions about runoff and new business, expected repricing behaviour and changes in wholesale market interest rates. Simulations using a range of interest rate scenarios are used to provide a series of potential future NII outcomes. The interest rate scenarios modelled include those projected using historical market interest rate volatility as well as 100 and 200 basis point shifts up and down from current market yield curves. Additional stressed interest rate scenarios are also considered and modelled.

A comparison between the NII outcomes from these modelled scenarios indicates the sensitivity to interest rate changes. On and off-balance sheet instruments are then used to manage this interest rate risk.

NaR limit

The BRCC has approved a NaR limit. This limit is managed by the Treasurer and is expressed as a deviation from benchmark hedge levels over a one-year rolling time frame, to a 99% level of confidence. This limit is monitored by FMTR.

VaR limit

The BRCC has also approved a VaR limit for ALM activities. This limit is managed by the Treasurer and monitored by FMTR. Additionally, FMTR sets structural risk limits to prevent undue concentration of risk.

Structural foreign exchange rate risk

Structural foreign exchange rate risk results from the generation of foreign currency denominated earnings and from Westpac's capital deployed in offshore branches and subsidiaries, where it is denominated in currencies other than Australian dollars. The Australian dollar equivalent of offshore earnings and capital is subject to change as exchange rates fluctuate, which could introduce significant variability to Westpac's reported financial results. ALCO provides oversight of the appropriateness of foreign exchange hedges on earnings.

Risk reporting

Interest rate risk in the banking book risk measurement systems and personnel are located in Sydney, Auckland, Singapore and Shanghai. These include front office product systems, which capture all treasury funding and derivative transactions; the transfer pricing system, which captures all retail and other business transactions; non-traded Interest Rate Risk systems, which calculate amongst other things, ALM VaR and NaR.

Daily monitoring of current exposure and limit utilisation is conducted independently by FMTR, which monitors market risk exposures against VaR, NaR and structural risk limits. Management reports detailing structural positions and VaR are produced and distributed daily for use by dealers and management across all stakeholder groups. Monthly and quarterly reports are produced for the senior management market risk forums of RISKCO and BRCC respectively to provide transparency of material market risks and issues.

Risk mitigation

Market risk arising in the banking book stems from the ordinary course of banking activities, including structural interest rate risk (the mismatch between the duration of assets and liabilities) and capital management. Hedging Westpac's exposure to interest rate risk is undertaken using derivatives. The hedge accounting strategy adopted utilises a combination of the cash flow, fair value and net investment hedge approaches. Some derivatives held for economic hedging purposes do not meet the criteria for hedge accounting as defined under AASB 139 Financial Instruments: Recognition and Measurement and therefore are accounted for in the same way as derivatives held for trading.

The same controls used to monitor traded market risk allow for continuous monitoring by management.

Liquidity risk is the risk that Westpac will be unable to fund assets and meet obligations as they come due. This type of risk is inherent in all banks through their role as intermediaries between depositors and borrowers.

Approach

Liquidity risk is measured and managed in accordance with the policies and processes defined in the BRCC approved Liquidity Risk Management Framework.

Responsibility for managing the Group's liquidity and funding positions in accordance with the Group's Liquidity Risk Management Framework is delegated to Treasury, under the oversight of ALCO.

Liquidity Risk Management Framework

Westpac's Liquidity Risk Management Framework sets out the liquidity risk appetite, roles and responsibilities, tools for measuring and managing liquidity risk, reporting procedures and supporting policies. The key components of the Liquidity Risk Management Framework are listed below.

Funding strategy

Treasury undertakes an annual funding review that outlines the funding strategy for the coming year. This review encompasses trends in global markets, peer analysis, wholesale funding capacity, expected funding requirements and a funding risk analysis. This strategy is continuously reviewed to take account of changing market conditions, investor sentiment and estimations of asset and liability growth rates. The annual funding strategy is reviewed and supported by ALCO prior to approval by the BRCC.

To further strengthen the management of Westpac's funding, the Stable Funding Ratio (SFR) is used to focus on the composition and stability of the overall funding base. Stable funding consists of customer deposits, equity and wholesale term funding with residual maturity greater than twelve months (including securitisation). As at 30 September 2015 the SFR was 83.8%. See also section 2.4.2 'Funding and Liquidity Risk Management' in the Westpac Group 2015 Financial Results Announcement for further detail.

Minimum liquid asset holdings

Westpac holds a portfolio of liquid assets that are eligible to be used as collateral for repurchase agreements with the Reserve Bank of Australia or other central banks. The BRCC approves minimum holdings of high-quality liquid assets (HQLA) annually.

'Going Concern' scenario

The Group maintains a 'going concern' model with reports issued and reviewed on a daily basis. Under the 'going concern' model wholesale debt maturities are added to planned net asset growth to provide an estimate of the wholesale funding task across a range of time horizons. Maturity concentrations are measured against a Board approved limit structure with limits set at intervals from one week to 15 months.

Stress testing

Stress testing is carried out to assess Westpac's ability to meet cash flow obligations under a range of market conditions, including name specific and market wide stress scenarios. These scenarios inform liquidity limits and strategic planning.

Liquidity transfer pricing

Westpac has a liquidity transfer pricing process which measures and allocates liquidity risk across the Group.

Contingency planning

Treasury maintains a contingency funding plan that outlines the steps that should be taken by Westpac in the event of an emerging 'funding crisis'. The plan is reviewed and approved by ALCO and is aligned with Westpac's broader Liquidity Crisis Management Policy which is approved annually by the BRCC.

Liquidity reporting

Daily liquidity risk reports are circulated to, and reviewed by, local and senior staff in Treasury and the Liquidity Risk team. Daily monitoring of the liquidity risk position is conducted by the Liquidity Risk team, which monitors compliance with liquidity limits. Liquidity reports are presented to ALCO monthly and to the BRCC quarterly.

Liquidity Coverage Ratio disclosure

The Liquidity Coverage Ratio (LCR) requires banks to hold sufficient high-quality liquid assets, as defined, to withstand 30 days under a regulator-defined acute stress scenario. The LCR came into effect from 1 January 2015. The Group's average monthly LCR for the quarter ending 30 September 2015 was 121%¹.

Liquid assets comprise High Quality Liquid Assets (HQLA), the Committed Liquidity Facility (CLF) from the Reserve Bank of Australia and additional qualifying Reserve Bank of New Zealand securities. Westpac received approval from APRA for a CLF of \$66 billion for the calendar year 2015. The Group maintains a portfolio of HQLA and these averaged \$62.4 billion over the quarter¹.

Funding is sourced from retail, small business and institutional customer deposits and wholesale funding. The Group seeks to minimise the outflows associated with this funding by targeting customer deposits with lower LCR outflow rates and actively manages the maturity profile of its wholesale funding portfolio.

Westpac maintains a buffer over the regulatory minimum of 100%.

30 September 2015 \$m	Total unweighted value (average) ¹	Total weighted value (average) ¹

¹ Calculated as a simple average of the data points for 31 July 2015, 31 August 2015 and 30 September 2015.

Employees subject to the remuneration disclosure requirements under APS 330 Attachment G are:

- Senior managers¹: There are 28 employees identified by the Westpac Statutory Officers Fit & Proper Policy as responsible persons. These employees are the most senior executives of Westpac and are also considered material risk takers. Their activities can materially affect a substantial part of Westpac or its financial standing, either directly or indirectly. These employees are subject to both the Westpac Group Remuneration Policy and the Executive Remuneration Framework; and
- Material risk takers: In addition to the senior managers, there are 5 employees who have been assessed as having the ability to affect the financial soundness of Westpac as an Authorised Deposit-taking Institution. These are employees who can influence the Group's capital and/or liquidity, take market risk positions, and/or approve large credit exposures or programs. All of these employees are subject to the Westpac Group Remuneration Policy and those who are at the General Manager level are also covered by the Executive Remuneration Framework.

Qualitative Disclosures

Westpac Group Remuneration Policy

The objective of the Westpac Group Remuneration Policy (the Policy) is to attract and retain talented employees, by rewarding them for achieving high performance and delivering superior long term results for our customers and our shareholders, while adhering to sound risk management and governance principles. The Policy applies to all employees of Westpac Banking Corporation globally (except temporary/casual employees), and its related bodies corporate². Specific variable reward plans are established to ensure alignment between business strategy and performance. Processes are in place to ensure remuneration arrangements comply with regulatory requirements.

The Policy is reviewed by the Board Remuneration Committee (BRC) on a regular basis. There were no changes made to the Policy on 2015.

Reward Strategy and Framework

Senior managers are remunerated based on a total reward framework which is designed to:

- motivate strong performance against short-term and long-term performance measures;
- manage risk appropriately;
- link pay to shareholders interests; and
- attract and retain high performing executives.

For senior managers and material risk takers at the General Manager level, the total reward framework has three components: fixed remuneration, short-term incentive (STI) and long-term incentive (LTI), and in aggregate, is benchmarked against relevant financial services competitors.

The remuneration strategy for all other employees, including material risk takers below the General Manager level, remains aligned with our approach for senior managers. In particular:

- fixed remuneration is aligned to the market and is reviewed annually;
- we provide superannuation for employees in Australia, New Zealand and some other countries in which we operate;
- employees have the opportunity to participate in an STI plan designed to support the objectives of their division and the Group, including risk management. All employees who receive an STI award above a certain threshold have a portion of the award deferred; and
- eligible employees may receive an annual award of Westpac ordinary shares up to the value of \$1,000 under the Employee Share Plan provided the Group meets at least one of two hurdles: an increase in share price or the achievement of a basket of strategic measures. The Chief Executive Officer (CEO), senior managers and any other employee who received an STI award deferred into equity or an LTI award during the year are not eligible to receive an Employee Share Plan award for that year.

Variable Remuneration

There are two forms of variable remuneration:

- STI which comprises cash and, if payments are above deferral thresholds, equity. Performance is measured against risk-adjusted financial targets and non-financial targets that support the Group's strategy. STI plans are designed to support the objectives of their division, business unit and/or team and include risk management objectives or minimum risk and compliance requirements.

¹ The senior manager definition utilised in these disclosures is the APRA definition of "Responsible person" under paragraph 59(a) of *Prudential Standard CPS 510 Governance*. The Westpac equivalent is CEO, Group Executives and General Managers designated as responsible persons.

² This policy does not extend to any related bodies corporate which are separately listed on the Australian Securities Exchange.

- LTI which is designed to align the total remuneration of executives to the long term performance of the Group and the interests of shareholders. The amount of the award takes into account market benchmarks, individual performance over time, succession potential and key skills.

Total Reward Framework – Senior Managers & Material Risk Takers		
Fixed Remuneration	At Risk Remuneration (Variable Reward)	
Comprises: <ul style="list-style-type: none"> ▪ Cash salary ▪ Salary sacrifice items ▪ Employer superannuation contributions in line with statutory obligations 	Short-term Incentive (STI)	
	Maximum Opportunity = 150% of Target STI (for employees on target based plans)	
	Cash STI	Deferred STI Restricted Shares or share rights
		Long-term Incentive (LTI)
		Comprise performance share rights which vest over a four-year period if performance hurdles are achieved (excludes material risk takers below General Manager level)

The mix of fixed remuneration and at risk remuneration varies across employees and groups of employees. Factors which determine the mix include the role type, level of employee, market benchmarks and performance.

Deferral

Variable reward payments for all employees are subject to deferral depending on the value of the payment and the level and type of role. Depending on their role, senior managers and material risk takers have their reward deferred as outlined in the table below:

Role Type	Deferral Arrangement
CEO and Group Executives	<ul style="list-style-type: none"> • 50% of STI is deferred equally over two years
General Managers	<ul style="list-style-type: none"> • 40% of STI is deferred equally over two years
Specialist General Managers in Westpac Institutional Bank ¹	<ul style="list-style-type: none"> • 40% of STI is deferred equally over two years • 50% deferral for portion of payment above \$500,000, vesting equally over two years
Westpac Institutional Bank employees	<ul style="list-style-type: none"> • 25% deferral where variable reward payment is \$150,000 or greater, vesting equally over three years • 50% deferral for portion of payment above \$500,000, vesting equally over three years • 70% deferral for portion of payment above \$2,000,000, vesting equally over three years
Other employees	<ul style="list-style-type: none"> • 25% deferral where variable reward payment is \$150,000 or greater, vesting equally over two years • 50% deferral for portion of payment above \$500,000, vesting equally over two years • 70% deferral for portion of payment above \$2,000,000, vesting equally over two years

STI is deferred into equity either in the form of Westpac ordinary shares (for Australia-based employees) or Westpac share rights (for senior managers outside Australia). Deferral periods are determined on the basis of the overall Westpac Group risk profile, with deferrals in Westpac Institutional Bank being longer than the rest of the Group.

By deferring a portion of the STI in the form of restricted equity, STI awards are better aligned with the interests of shareholders as the ultimate value of the deferred portion is tied to movements in share price over the deferral period.

¹ General Managers designated as either senior managers or material risk takers.

The Group's deferral framework provides the ability to reduce or cancel unvested deferred variable reward for significant risk and financial misstatement issues.

Senior managers and material risk takers or above the General Manager level receive annual LTI awards in the form of share rights under the Long Term Incentive Plan. A share right is not a Westpac share and does not attract the payment of dividends.

Senior managers and material risk takers at or above the General Manager level only receive value from their LTI awards where the performance hurdles are achieved. The two hurdles for the December 2014 grants are relative Total Shareholder Return (TSR) and Compound Annual Growth in Cash Earnings Per Share (EPS).

Remuneration Governance

Governance Structure

The BRC supports the Board. Its primary function is to assist the Board to fulfil its responsibilities to shareholders with regard to remuneration. The BRC monitors the remuneration policies and practices of the Group, external remuneration practices, market expectations and regulatory requirements in Australia and internationally. The BRC's purpose, responsibilities and duties are outlined in the Charter which is available on the Group's website.

All members of the BRC are independent Non-executive Directors.

There were five BRC meetings held during 2015.

Committee fees for the BRC Chairman for the 2015 performance year were \$56,000 per annum and for BRC members were \$28,000 per annum.

External Advisors

During 2015, the Board retained Guerdon Associates as its independent consultant to provide specialist information on executive remuneration and other Group remuneration matters. These services are provided directly to the BRC which is independent of management. The Chairman of the BRC oversees the engagement of, remuneration arrangements for, and payment of, the independent consultant.

Work undertaken by Guerdon Associates during 2015 included the provision of information relating to the benchmarking of Non-executive Director, CEO and senior manager remuneration and analysis regarding the Group's EPS LTI performance hurdle. No remuneration recommendations, as prescribed under the Corporations Act, were made by Guerdon Associates in 2015.

Independence of Risk and Financial Control Employees

We follow a process of 'two-up' approval for all remuneration decisions. This means that remuneration is approved by the next most senior person above the employee's manager.

To supplement the 'two-up' approval requirement, performance based remuneration and scoreboards for Risk and Financial Control General Managers must be reviewed for consistency and approved by the Chief Risk Officer, the Chief Operating Officer¹ or the Chief Financial Officer (as appropriate) to ensure independence is not compromised.

Performance based remuneration and structure of scoreboards for Risk and Financial Control employees below General Manager level must also be approved by the Risk/Compliance/Finance function General Managers (as appropriate). All remuneration outcomes of risk and financial control employees are subject to review and approval to ensure they are remunerated independently of the businesses they oversee.

Remuneration and Risk

The Group's remuneration strategy, total reward framework, policies and practices all reflect the sound risk management that is fundamental to the way we operate. The performance of each division within the Group is reviewed and measured with reference to how risk is managed and the results influence remuneration outcomes. The key risks that are taken into account when implementing remuneration measures are capital requirements, credit, market, liquidity, operational and compliance risk.

A Group-wide deferral framework is in place providing consistency across the Group and enhancing our remuneration framework from a risk management perspective. This deferral framework also provides the Board with the ability to adjust the number of unvested securities downwards, or to zero (in which case they will lapse) where such adjustment is appropriate to respond to misconduct resulting in significant financial and/or reputational impact to Westpac.

¹ As the Group Executive responsible for Compliance.

Performance and Remuneration

The performance based components of remuneration are designed to:

- encourage behaviour that supports Westpac's long term financial soundness and the risk management framework; and
- allow for adjustments to reflect the business outcomes and risks associated with that business.

Scoreboards

The BRC reviews and makes recommendations to the Board on individual performance objectives for the CEO. These objectives are intended to provide a robust link between remuneration outcomes and the key drivers of long-term shareholder value. The STI objectives are set in the form of a scoreboard with targets and measures aligned to our strategic priorities cascaded from the CEO scoreboard to the relevant senior manager scoreboard.

Senior managers and material risk takers each have a balanced scoreboard, combining both annual financial and non-financial objectives which support the Group's strategic short and long-term goals.

The 2015 scoreboard focuses on customer, strategic, risk, sustainability and employee elements. The key financial and non-financial objectives for the CEO in the 2015 financial year are provided below.

Category	Weighting	Measure ¹
Return	30%	<ul style="list-style-type: none"> • Economic Profit • Return on Equity
Growth	10%	<ul style="list-style-type: none"> • Core Earnings Growth
	20%	<ul style="list-style-type: none"> • Customers • Market Share • Wealth • Asia
Strength	10%	<ul style="list-style-type: none"> • Adherence to Group Risk Appetite Statement (RAS)
	10%	<ul style="list-style-type: none"> • Balance Sheet Strength and Sustainable Funding
	10%	<ul style="list-style-type: none"> • Business & Technology Architecture
	10%	<ul style="list-style-type: none"> • People and Sustainability

Scoreboard categories for senior managers and material risk takers are consistent with the framework for the CEO, weightings and measures reflect individual roles.

Group economic profit, Group core earnings growth and Group return on equity accounted for 40% of the CEO's scoreboard for 2015. Similarly, senior manager scoreboards had 45% of their STI allocated based on Group economic profit, divisional economic profit, divisional core earnings growth and divisional expense management.

A performance measure related to the Board's RAS accounted for a further 10% of the CEO's and senior managers' scoreboards. The RAS includes capital requirements, credit, market, liquidity, operational and compliance risk. In addition, the CEO and each senior manager are assessed on specific risk measures that may influence any discretionary adjustment to the scoreboard.

Scoreboards for material risk takers also include risk measures such as economic profit, compliance, and adherence to the Group RAS with weightings ranging from 40% to 80%.

Variable Reward Pool

Each year, the Board determines the size of the variable reward pool which funds variable reward outcomes across the Group. This is based on the Group's performance for the year and an assessment of how profit should be shared among shareholders and employees and retained for growth. The primary financial indicator used is economic profit, which measures cash earnings adjusted for cost of capital used in the business. Cash earnings, return on equity, cash EPS and dividends are also taken into account.

Performance Adjustments

The Board and the BRC recognise that the scoreboard approach, while embracing a number of complementary performance objectives, will never entirely assess overall performance. The BRC may therefore make discretionary adjustments, positive and negative, to the scoreboard outcomes for senior managers.

¹ Individual measures will differ for each senior manager.

The BRC uses the following criteria to apply discretionary adjustments:

- matters not known or not relevant at the beginning of the financial year, which are relevant to the under or over performance of the CEO and senior managers during the financial year;
- the degree of stretch implicit in the scoreboard measures and targets themselves and the context in which the targets were set;
- whether the operating environment during the financial year has been materially better or worse than forecast;
- comparison with the performance of the Group's principal competitors;
- any major positive or negative risk management or reputational issue that impacts the Group;
- the quality of the financial result as shown by its composition and consistency;
- whether there have been major positive or negative aspects regarding the quality of leadership and/or behaviours consistent with our values; and
- any other relevant under or over performance or other matters not captured.

A similar approach is cascaded throughout the organisation with a two-up approval of all performance outcomes. Under all circumstances, the Board has ultimate discretion to determine or vary the outcome of any variable payment.

The Board has absolute discretion to adjust incentive payments downwards to reflect business outcomes, including to zero if appropriate, if such adjustments are necessary to protect the financial soundness of Westpac or to respond to significant unexpected or unintended consequences.

Quantitative Disclosures

For 2015, two senior managers received termination payments¹ totalling \$2,584,709 and two senior managers received payments totalling \$1,295,000 reflecting annual incentives foregone from their previous employers on appointment to Westpac. No senior managers or material risk takers received guaranteed bonuses.

Deferred Remuneration

	30 September 2015				30 September 2014

- Shares and share-linked instruments	-	-	-	-	-	-	-	-
- Other ⁷	675	-	186	-	436	-	215	-
Variable remuneration ⁸								
- Cash based ⁹	9,984	-	6,190	-	14,145	-	7,258	-
- Shares and share-linked instruments ¹⁰	-	17,663	-	6,041	-	22,455	-	8,608
- Other	-	-	-	-	-	-	-	-

¹ Reflects payment in lieu of notice in accordance with individual contract provisions and long term service to the Group.

² Value of unvested holdings at 30 September. All outstanding deferred remuneration is exposed to either explicit or implicit adjustments.

³ The FY15 explicit adjustment reflects testing of the EPS and TSR hurdles on 1 October 2014 and the FY14 explicit adjustment reflects a lapse due to cessation of employment. Explicit adjustments may also include malus, clawbacks or similar reversals or downward revaluations of awards.

⁴ Implicit adjustments include fluctuations in the value of shares or performance units during the year.

⁵ Prepared in accordance with APS330 Table 21A and accounting standard AASB 2, consistent with the process for the 2015 and 2014 Annual Report.

⁶ Cash based fixed remuneration is the total cost of salary, salary sacrificed benefits (including motor vehicles, parking, etc. and any associated fringe benefits tax) and an accrual for annual leave entitlements.

⁷ Other fixed remuneration relates to post employment benefits. Senior managers and material risk takers are provided with insurance cover under the Westpac Group Plan at no cost. Superannuation benefits have been calculated consistent with AASB 119.

⁸ 26 of 28 Senior Managers and all 5 Material Risk Takers received a variable reward in respect of 2015. 15 of 17 Senior Managers and all 6 Material Risk Takers received a variable reward in respect of 2014. The increase in the number of Senior Managers year on year is impacted by the appointment of Chief Risk Officers as Responsible Persons for the Westpac Group.

⁹ Cash based variable remuneration reflects annual cash performance awards accrued but not yet paid in respect of the year ended 30 September.

¹⁰ Shares and share-linked instruments are amortised over the applicable vesting period and the amount shown is the amortisation relating to the applicable reporting year, consistent with the applicable Annual Report.

¹ Unamortised issue costs relating to capital instruments are netted off against each instrument in the Balance Sheet. For regulatory capital purposes, these capital instruments are shown gross of unamortised issue costs. The unamortised issue costs are deducted from CET1 as part of capitalised expenses in Row 26f in the capital disclosure template.

² For regulatory capital purposes, APRA requires these instruments to be included as if they were unhedged.

The capital disclosure template below represents the post 1 January 2018 Basel III requirements. The Group is applying the Basel III regulatory adjustments in full as implemented by APRA.

Capital deduction for regulatory expected loss²

For capital adequacy purposes APRA requires the amount of regulatory expected credit losses in excess of eligible provisions to be deducted from capital. The following table shows how the deduction is calculated.

\$m	30 September 2015	31 March 2015	30 September 2014
Provisions associated with eligible portfolios			
Total provisions for impairment charges	3,332	3,505	3,481
plus general reserve for credit losses adjustment	112	107	133
plus provisions associated with partial write-offs	361	406	504
less ineligible provisions ¹	(135)	(131)	(132)
Total eligible provisions	3,670	3,887	3,986
Regulatory expected downturn loss	4,351	4,588	4,636
Shortfall in eligible provisions compared to regulatory expected downturn loss	(681)	(701)	(650)
Common equity Tier 1 capital deduction for regulatory expected downturn loss in excess of eligible provisions²	(696)	(734)	(650)

¹ Provisions associated with portfolios subject to the Basel standardised approach to credit risk are not eligible.

² Regulatory expected loss is calculated for portfolios subject to the Basel advanced capital IRB approach to credit risk. The comparison between regulatory expected loss and eligible provisions is performed separately for defaulted and non-defaulted exposures. As at 30 September 2015, there was an excess of eligible provisions compared to regulatory expected loss for defaulted exposures of \$15 million (31 March 2015: \$33 million). This excess is not available to reduce the shortfall for non-defaulted exposures in the calculation of the common equity Tier 1 capital deduction.

The following table cross-references the quantitative disclosure requirements given by Attachments A, C, D and E of APS330 to the quantitative disclosures made in this report. The continuous reporting requirements for capital instruments under Attachment B are satisfied separately and can be found on the regulatory disclosures section on the Westpac website.¹

¹ No Equity risk exposures.

² Remuneration disclosure is an annual reporting requirement under APS330.

³ First disclosure not required until 31 July 2016.

Term	Description
Actual losses	Represent direct write-offs and write-offs from provisions after adjusting for recoveries.
Additional Tier 1 capital	Comprises high quality components of capital that provide a permanent and unrestricted commitment of funds that are freely available to absorb losses but rank behind claims of depositors and other more senior creditors. They also provide for fully discretionary capital distributions.
Alternate Liquid Assets (ALA)	Assets that qualify for inclusion in the numerator of the LCR in jurisdictions where there is insufficient supply of HQLA.
Advanced measurement approach (AMA)	The capital requirement using the AMA is based on a bank's internal operational risk systems, which must both measure and manage operational risk.
Assets intended to be securitised	Represents securitisation activity from the end of the reporting period to the disclosure date of this report.
Australian accounting standards (AAS)	A set of Australian reporting standards and interpretations issued by the Australian Accounting Standards Board.
Australian and New Zealand standard industrial classification (ANZSIC)	A code used by the Australian Bureau of Statistics and Statistics New Zealand for classifying businesses.
Authorised deposit-taking institution (ADI)	ADIs are corporations that are authorised under the Banking Act 1959 to carry on banking business in Australia.
Banking book	The banking book includes all securities that are not actively traded by Westpac.
Cash EPS compound annual growth rate (CAGR)	An internal measure used to assess performance by measuring growth in cash earnings per share over a three year performance period.
Committed Liquidity Facility (CLF)	Facility established with the RBA to cover the shortfall in Australian dollars between the ADI's holding of HQLA and net cash outflows. The CLF is an ALA for the Group's LCR calculation.
Common equity Tier 1 (CET1) capital	The highest form of capital. The key components of common equity are shares, retained earnings and undistributed current year earnings.
Credit valuation adjustment (CVA) risk	Refer to mark-to-market related credit risk.
Default	A customer default is deemed to have occurred when Westpac considers that either or both of the following events have taken place: <ul style="list-style-type: none"> the customer is unlikely to pay its credit obligations to its financiers in full, without recourse by any of them to actions such as realising security (where held); and the customer is past due 90 or more calendar days on any material credit obligation to its financiers. Overdrafts will be considered past due once the customer has breached an advised limit, or been advised of a limit smaller than the current outstandings.
Double default rules	Double default applies to exposures where a particular obligor's exposure has been hedged by the purchase of credit protection from a counterparty and loss will only occur if both obligor and counterparty default. In this instance, capital can be reduced.
Exposure at default (EAD)	EAD represents an estimate of the amount of committed exposure expected to be drawn by the customer at the time of default.
Extended licensed entity (ELE)	An Extended Licensed Entity (ELE) comprises an ADI and any subsidiaries of the ADI that have been approved by APRA as being part of a single 'stand-alone' entity.
External credit assessment institution (ECAI)	ECAI is an external institution recognised by APRA (directly or indirectly) to provide credit assessment in determining the risk-weights on financial institutions' rated credit exposures (including securitisation exposures).

Facilities 90 days or more past due date not impaired	<p>Includes facilities where:</p> <ul style="list-style-type: none"> • contractual payments of interest and/or principal are 90 or more calendar days overdue, including overdrafts or other revolving facilities that remain continuously outside approved limits by material amounts for 90 or more calendar days; or • an order has been sought for the customer's bankruptcy or similar legal action has been instituted, which may avoid or delay repayment of its credit obligations; and • the estimated net realisable value of assets/security to which Westpac has recourse is sufficient to cover repayment of all principal and interest, or where there are otherwise reasonable grounds to expect payment in full and interest is being taken to profit on an accrual basis. <p>These facilities, while in default, are not treated as impaired for accounting purposes.</p>
Geography	Geographic segmentation of exposures is based on the location of the office in which these items were booked.
High-quality liquid assets (HQLA)	Assets which meet APRA's criteria for inclusion as HQLA in the numerator of the LCR.
Impaired assets	<p>Includes exposures that have deteriorated to the point where full collection of interest and principal is in doubt, based on an assessment of the customer's outlook, cashflow, and the net realisation of value of assets to which recourse is held:</p> <ul style="list-style-type: none"> • facilities 90 days or more past due, and full recovery is in doubt: exposures where contractual payments are 90 or more days in arrears and the net realisable value of assets to which recourse is held may not be sufficient to allow full collection of interest and principal, including overdrafts or other revolving facilities that remain continuously outside approved limits by material amounts for 90 or more calendar days; • non-accrual assets: exposures with individually assessed impairment provisions held against them, excluding restructured loans; • restructured assets: exposures where the original contractual terms have been formally modified to provide for concessions of interest or principal for reasons related to the financial difficulties of the customer; • other assets acquired through security enforcement (includes other real estate owned): includes the value of any other assets acquired as full or partial settlement of outstanding obligations through the enforcement of security arrangements; and • any other assets where the full collection of interest and principal is in doubt.
Industry	Exposures to businesses, government and other financial institutions are classified into industry clusters based upon groups of related ANZSIC codes. Companies that operate in multiple industries are classified according to their primary industry. Consumer customers are classified as "retail" and not further broken down.
Interest rate risk in the banking book (IRRBB)	The risk to current and future year interest income arising from a mismatch between the duration of assets and liabilities that arises in the normal course of banking activities.

Internal assessment approach (IAA)	Basel III provides three approaches to determine the risk-weight for a securitisation transaction, where the term securitisation includes any complex credit derivative. The internal assessment approach, a more complex approach, and subject to approval from APRA for use, may be used when there is an inability to use either the Ratings-Based Approach (no external rating available) or the supervisory formula approach. The internal assessment approach may be used to risk-weight exposures relating to residential mortgages (excluding reverse mortgages), trade receivables, equipment receivables and auto loans.
Internal ratings-based approach (IRB & Advanced IRB)	These approaches allow banks to use internal estimates of the risks of their loans as inputs into the determination of the amount of credit risk capital needed to support the organisation. In the Advanced IRB approach, banks must supply their own estimates for all three credit parameters – Probability of Default, Loss Given Default and Exposure at Default.
Leverage ratio	The leverage ratio is defined by APRA as Tier 1 capital divided by the “Exposure measure” and is expressed as a percentage. “Exposure measure” includes on-balance sheet exposures, derivatives exposures, securities financing transaction (SFT) exposures, and other off-balance sheet exposures.
Liquidity coverage ratio (LCR)	An APRA requirement to maintain an adequate level of unencumbered high quality liquid assets, to meet liquidity needs for a 30 calendar day period under an APRA-defined severe stress scenario. Absent a situation of financial stress, the value of the LCR must not be less than 100%, effective 1 January 2015. LCR is calculated as the percentage ratio of stock of HQLA, CLF and qualifying Reserve Bank of New Zealand securities over the total net cash out flows in a modelled 30 day defined stressed scenario.
Loss given default (LGD)	The LGD represents an estimate of the expected severity of a loss to Westpac should a customer default occur during a severe economic downturn. Westpac assigns LGD to each credit facility, assuming an event of default has occurred and taking into account a conservative estimate of the net realisable value of assets to which Westpac has recourse and over which it has security. LGDs also reflect the seniority of exposure in the customer’s capital and debt structure.
Maturity	The maturity date used is drawn from the contractual maturity date of the customer loans.
Mark-to-market related credit risk	The risk of mark-to-market losses related to deterioration in the credit quality of a derivative counterparty also referred to as credit valuation adjustment (CVA) risk.
Monte Carlo simulation	A method of random sampling to achieve numerical solutions to mathematical problems.
Net cash outflows	Total expected cash outflows minus total expected cash inflows in the specified LCR stress scenario calculated in accordance with APRA’s liquidity standard.
Net interest income at risk (NaR)	BRCC-approved limit expressed as a deviation from the benchmark hedge level over a 1-year time frame, at a 99% confidence level.
Off-balance sheet exposure	Credit exposures arising from facilities that are not recorded on Westpac’s balance sheet (under accounting methodology). Undrawn commitments and the expected future exposure calculated for Westpac’s derivative products are included in off-balance sheet exposure.
On balance sheet exposure	Credit exposures arising from facilities that are recorded on Westpac’s balance sheet (under accounting methodology).
Potential future credit exposure (PFCE)	The PFCE for each transaction is calculated by multiplying the effective notional principal amount by a credit conversion factor specified in APS112.
Probability of default (PD)	Probability of default is a through-the-cycle assessment of the likelihood of a customer defaulting on its financial obligations within one year.

Ratings-based approach (RBA)	Basel III provides three approaches to determine the risk-weight for a securitisation transaction, where the term securitisation includes any complex credit derivative. The Ratings-Based Approach relies on the number of assets in the transaction and the external credit rating of the tranche to determining a regulatory risk-weight.
Regulatory expected loss (EL)	<p>For regulatory purposes EL is defined as:</p> <ul style="list-style-type: none"> • for non-defaulted exposures, the product of PD, LGD and EAD; and • for defaulted exposures, the best estimate of expected loss for that exposure. It is equivalent to provisions for impaired assets and represents charges already realised through Westpac's earnings. <p>Regulatory EL is not calculated for standardised portfolios and is based on mandated risk-weights for specialised lending portfolios. Regulatory EL should not be interpreted as an estimate of long-run expected loss because the LGDs used in all regulatory calculations are calibrated to reflect stressed economic conditions rather than long run averages.</p>
Resecuritisation	A resecuritisation exposure is a securitisation exposure in which the risk associated with an underlying pool of exposures is tranching and at least one of the underlying exposures is a securitisation exposure. In addition, an exposure to one or more resecuritisation exposures is a resecuritisation exposure;
Risk weighted assets (RWA)	Assets (both on and off-balance sheet) are risk weighted according to each asset's inherent potential for default and what the likely losses would be in case of default. In the case of non asset based risks (ie market and operational risk), RWA is determined by multiplying the capital requirements for those risks by 12.5.
Securitisation purchased	The purchase of third party securitisation exposure, for example residential mortgage backed securities.
Securitisation retained	Securitisation exposures arising through Westpac originated assets or generated by Westpac third party securitisation activity.
Securities financing transactions (SFT)	APRA defines SFTs as "transactions such as repurchase agreements, reverse repurchase agreements, and security lending and borrowing, and margin lending transactions, where the value of the transactions depends on the market valuation of securities and the transactions are typically subject to margin agreements."
Sponsor	An ADI would generally be considered a sponsor if it, in fact or substance, manages or advises the securitisation program, places securities into the market, or provide liquidity and/or credit enhancements.
Standard model	The standard model for Market risk applies supervisory risk weights to trading positions.
Stressed VaR	Stressed VaR uses the approved VaR model but applies a period of significant market stress. Market risk capital is estimated by adding Stressed VaR to regular VaR.
Substitution approach	Substitutions refers to the rules governing the circumstances when capital can be reduced because an obligor's exposure has been hedged by the purchase of credit protection from a counterparty and the counterparty's PD is used in place of the obligors' PD.
Supervisory formula (SF)	Basel III provides three approaches to determine the risk-weight for a securitisation transaction, where the term securitisation includes any complex credit derivative. The supervisory formula is used when the Ratings-Based Approach is unable to be used.
Tier 2 capital	Includes other capital elements, which, to varying degrees, fall short of the quality of Tier 1 capital but still contribute to the overall strength of an entity as a going concern.

Trading book	Trading book activity represents dealings that encompass book running and distribution activity. The types of market risk arising from trading activity include interest rate risk, foreign exchange risk, commodity risk, equity price risk, credit spread risk and volatility risk. Financial Markets and Treasury are responsible for managing market risk arising from Westpac's trading activity.
Value at risk (VaR)	VaR is the potential loss in earnings from adverse market movements and is calculated over a one-day time horizon at a 99% confidence level using a minimum of one year of historical rate data. VaR takes account of all material market variables that may cause a change in the value of the trading portfolio and the banking book including interest rates, foreign exchange rates, price changes, volatility, and the correlation among these variables.

Exchange rates

The following exchange rates were used in the Westpac Pillar 3 report, and reflect spot rates for the period end.

\$	30 September 2015	31 March 2015	30 September 2014
USD	0.6997	0.7635	0.8768
GBP	0.4615	0.5167	0.5384
NZD	1.0983	1.0202	1.1195
EUR	0.6227	0.7078	0.6904

This Report contains statements that constitute 'forward-looking statements' within the meaning of Section 21E of the US Securities Exchange Act of 1934.

Forward-looking statements are statements about matters that are not historical facts. Forward-looking statements appear in a number of places in this Report and include statements regarding Westpac's intent, belief or current expectations with respect to its business and operations, market conditions, results of operations and financial condition, including, without limitation, future loan loss provisions and financial support to certain borrowers. Words such as 'will', 'may', 'expect', 'intend', 'seek', 'would', 'should', 'could', 'continue', 'plan', 'estimate', 'anticipate', 'believe', 'probability', 'risk' or other similar words are used to identify forward-looking statements. These forward-looking statements reflect Westpac's current views with respect to future events and are subject to change, certain risks, uncertainties and assumptions which are, in many instances, beyond Westpac's control, and have been made based upon management's expectations and beliefs concerning future developments and their potential effect upon Westpac. There can be no assurance that future developments will be in accordance with Westpac's expectations or that the effect of future developments on Westpac will be those anticipated. Actual results could differ materially from those expected, depending on the outcome of various factors, including, but not limited to:

- the effect of, and changes in, laws, regulations, taxation or accounting standards or practices and government policy, particularly changes to liquidity, leverage and capital requirements;
- the stability of Australian and international financial systems and disruptions to financial markets and any losses or business impacts Westpac or its customers or counterparties may experience as a result;
- market volatility, including uncertain conditions in funding, equity and asset markets;
- adverse asset, credit or capital market conditions;
- the conduct, behaviour or practices of Westpac or its staff;
- changes to Westpac's credit ratings;
- levels of inflation, interest rates, exchange rates and market and monetary fluctuations;
- market liquidity and investor confidence;
- changes in economic conditions, consumer spending, saving and borrowing habits in Australia, New Zealand and in other countries in which Westpac or its customers or counterparties conduct their operations and Westpac's ability to maintain or to increase market share and control expenses;
- the effects of competition in the geographic and business areas in which Westpac conducts its operations;
- information security breaches, including cyberattacks;
- reliability and security of Westpac's technology and risks associated with changes to technology systems;
- the timely development and acceptance of new products and services and the perceived overall value of these products and services by customers;
- the effectiveness of Westpac's risk management policies, including internal processes, systems and employees;
- the incidence or severity of Westpac insured events;
- the occurrence of environmental change or external events in countries in which Westpac or its customers or counterparties conduct their operations;
- internal and external events which may adversely impact Westpac's reputation;
- changes to the value of Westpac's intangible assets;
- changes in political, social or economic conditions in any of the major markets in which Westpac or its customers or counterparties operate;
- the success of strategic decisions involving diversification or innovation, in addition to business expansion and integration of new businesses; and
- various other factors beyond Westpac's control.

The above list is not exhaustive. For certain other factors that may impact on forward-looking statements made by Westpac, refer to 'Risk factors' under the section 'Risk and risk management' in Westpac's 2015 Annual Report. When relying on forward-looking statements to make decisions with respect to Westpac, investors and others should carefully consider the foregoing factors and other uncertainties and events.

Westpac is under no obligation to update any forward-looking statements contained in this Report, whether as a result of new information, future events or otherwise, after the date of this Report.
