

PILLAR 3 REPORT

WESTPAC

MARCH 2026

INCORPORATING THE
REQUIREMENTS OF APS 330

Acknowledgement of Indigenous Peoples

Westpac acknowledges the First Peoples of Australia. We recognise their ongoing role as Traditional Owners of the land and waters of this country and pay our respects to Elders, past and present. We extend our respect to Westpac's Aboriginal and Torres Strait Islander employees, partners and stakeholders and to the Indigenous Peoples in the other locations where we operate.

In Aotearoa (New Zealand) we also acknowledge tāngata whenua and the unique relationship that Indigenous Peoples share with all New Zealanders under Te Tiriti o Waitangi.

INTRODUCTION

Westpac Banking Corporation is an Authorised Deposit-taking Institution (ADI) subject to regulation by the Australian Prudential Regulation Authority (APRA). Westpac is primarily accredited to use the Advanced Internal Ratings-Based Approach (A-IRB) for credit risk, the Standardised Measurement Approach (SMA) for operational risk and is required to apply the Pillar 1 Basel capital framework in our assessment of traded market risk and interest rate risk in the banking book (IRRBB).

This report has been prepared in accordance with *APS 330 Public Disclosure* (APS 330) and Westpac's Board approved Prudential Disclosure Policy. This report provides prudential information about our risk management practices and measures. Westpac is required to comply with the disclosure requirements issued by the Basel Committee on Banking Supervision (BCBS), subject to certain amendments by APRA. Disclosure requirements vary for quarterly, semi-annual and annual Pillar 3 reports.

In addition to this report, the regulatory disclosures section of Westpac's website¹ contains the reporting requirements for capital instruments under paragraph 37 of APS 330 and CCA: Main features of regulatory capital instruments.

Capital instruments disclosures are updated when:

- A new capital instrument is issued that will form part of regulatory capital; or
- A capital instrument is redeemed, converted into Common equity tier 1 (CET1) capital, written off, or its terms and conditions are changed.

Total capital ratio (%) (pre-floor ratio)	22.71%	22.71%	22.77%	23.01%	22.89%

1. The KM1 key metrics reflect the application of expected credit loss accounting under AASB 9.

KEY METRICS

Level 2 CET1 capital ratio movement First Half 2026 - Second Half 2025

The Level 2 CET1 capital ratio was down 11 basis points to 12.4%. Key movements included:

- First Half 2026 net profit added 74 basis points;
- Payment of the 2025 final ordinary dividend detracted 57 basis points;
- RWA movement reduction of 31 basis points with higher IRRBB and credit RWA partly offset by lower operational RWA; and
- Capital deductions and other items added 3 basis points mainly due to lower capitalised software and deferred tax asset deductions.

Tier 2 capital First Half 2026 – Second Half 2025

The Group issued \$2.5 billion of Tier 2 capital instruments and redeemed \$1.25 billion. The net impact of these transactions was an increase in the total capital ratio of approximately 27 basis points. In addition, foreign currency revaluations reduced Tier 2 capital mainly due to the appreciation of the AUD against the USD.

Risk Weighted Assets (RWA)

\$m	31 March 2026	30 September 2025	% Mov't
Credit risk ^a	357,050	354,476	1
Market risk	10,504	9,873	6
Interest rate risk in the banking book	47,088	37,290	26
Operational risk	43,701	48,409	(10)
Total	458,343	450,048	2

a. Includes counterparty credit risk, credit valuation adjustment, securitisation exposures in the banking book and settlement risk.

Total RWA increased by 2% over the half due to increases in both credit and non-credit RWA.

Credit RWA increased by \$2.6 billion. Key movements included:

- A \$14.7 billion increase from higher lending primarily in Corporate and Residential Mortgages;
- A \$5.8 billion decrease due to improvements in Residential Mortgages delinquency rates and Corporate credit quality metrics;
- A \$3.6 billion decrease from data refinements mainly in Corporate; and
- A \$2.7 billion decrease from foreign currency translation impacts, predominantly the appreciation of the AUD against the NZD and USD.

Non-credit RWA increased by \$5.7 billion. Key movements included:

- IRRBB RWA: A \$9.8 billion increase due to a larger embedded loss component from higher long-term interest rates and additional capital required for increased core deposit hedging partly offset by reductions resulting from the revised APS 117 standard changes; and
- Operational RWA: A \$4.7 billion decrease from:
 - A \$6.25 billion reduction following the removal of the remaining APRA-imposed operational risk capital overlay; and
 - A \$1.6 billion increase due to the annual Standardised Measurement Approach (SMA) operational risk review based on the latest annual audited financial statements.

Leverage ratio First Half 2026 – Second Half 2025

The leverage ratio represents the percentage of Tier 1 capital relative to the Exposure Measure¹. The leverage ratio remained at 5.0% well above APRA's regulatory minimum requirement of 3.5%.

Liquidity Coverage Ratio (LCR)

Westpac's average LCR for the quarter ended 31 March 2026 was 132% (31 December 2025: 133%), well above the regulatory minimum of 100%. The decrease in the ratio was due to higher average net cash outflows.

Net Stable Funding Ratio (NSFR)

Westpac NSFR for the quarter remained unchanged at 112% (31 December 2025: 112%) and continues to be above the regulatory minimum of 100%. The NSFR for the quarter reflects an increase in ASF driven by growth in customer deposits and wholesale funding offset by an increase in RSF driven by higher lending.

Regulatory Developments

APRA has announced a number of changes to banks' capital and liquidity requirements. In addition, the RBNZ has announced its decisions relating to its review of key capital settings for deposit takers. Further details on these announcements are set out in the Capital Overview section.

Second Quarter 2026 - First Quarter 2026 CET1 capital ratio movement

The Level 2 CET1 capital ratio increased by 11 basis points over the quarter mainly from net profit, partly offset by higher IRRBB RWA.

1. As defined under Attachment D of APS 110: Capital Adequacy.

GROUP STRUCTURE

APRA applies a tiered approach to measuring Westpac's capital adequacy¹ by assessing financial strength at three levels:

- Level 1, comprising Westpac Banking Corporation and its subsidiary entities that have been approved by APRA as being part of a single 'Extended Licensed Entity' (ELE) for the purposes of measuring capital adequacy;
- Level 2, the consolidation of Westpac Banking Corporation and all its subsidiary entities except those entities specifically excluded by APRA regulations. The head of the Level 2 group is Westpac Banking Corporation; and
- Level 3, the consolidation of Westpac Banking Corporation and all its subsidiary entities.

Unless otherwise specified, all quantitative disclosures in this report refer to the prudential assessment of Westpac's financial strength on a Level 2 basis². Refer to Appendix II for a list of entities excluded from regulatory consolidation for the purposes of measuring capital adequacy at Level 1 and Level 2.

The Westpac Group

The following diagram shows the Level 3 conglomerate group and illustrates the different tiers of regulatory consolidation.

Accounting consolidation³

The consolidated financial statements incorporate the assets and liabilities of all entities including structured entities controlled by Westpac. Westpac and its subsidiaries are referred to collectively as the 'Group'. The effects of all transactions between entities in the Group are eliminated on consolidation. Control exists when the parent entity is exposed to, or has rights to, variable returns from its involvement with an entity, and has the ability to affect those returns through its power over that entity. Subsidiaries are fully consolidated from the date on which control commences and they are no longer consolidated from the date that control ceases.

Group entities excluded from the regulatory consolidation at Level 2

Regulatory consolidation at Level 2 covers the global operations of Westpac and its subsidiary entities, including other controlled banking, securities and financial entities, except for those entities involved in the following business activities:

- Acting as manager, responsible entity, approved trustee, trustee or similar role in relation to funds management;
- Non-financial (commercial) operations;
- Special purpose entities to which assets have been transferred in accordance with the requirements of *APS 120 Securitisation*; or
- Insurance.

Retained earnings and equity investments in subsidiary entities excluded from the consolidation at Level 2 are deducted from capital, with the exception of securitisation special purpose entities.

1. *APS 110 Capital Adequacy* outlines the overall framework adopted by APRA for the purpose of assessing the capital adequacy of an ADI.
 2. Impaired assets and provisions held in Level 3 entities are excluded from the tables in this report.
 3. Refer to Note 29 and Consolidated Entity Disclosure Statement of Westpac's 2025 Annual Report for further details.

Subsidiary banking entities

Westpac New Zealand Limited (WNZL), a wholly owned subsidiary entity, is a registered bank incorporated in New Zealand and regulated by, among others, the Reserve Bank of New Zealand (RBNZ) for prudential purposes. WNZL uses both A-IRB and Standardised methodologies for credit risk and the SMA for operational risk. Other subsidiary banking entities in the Group include Westpac Bank PNG Limited and Westpac Europe GMBH. For the purposes of determining Westpac's capital adequacy, subsidiary banking entities are consolidated at Level 2.

Customer operations

Westpac is one of Australia's leading providers of banking and certain financial services, operating under multiple brands in Australia and in New Zealand, with a small presence in Europe, North America, Asia and the Pacific. Westpac provides banking products and services through its digital and online channels, supported by a branch and ATM network, contact centres and relationship and product managers.

Restrictions and major impediments on the transfer of funds or regulatory capital within the Group

Certain subsidiary banking and trustee entities are subject to specific and local prudential regulation in their own right, including local capital adequacy requirements. Westpac seeks to ensure that its subsidiary entities are adequately capitalised and adhere to regulatory requirements at all times. Dividends and capital are repatriated in line with the Group's policy subject to subsidiary Board approval and local regulations.

Intra-group exposure limits

Exposures to related entities are managed within the prudential limits prescribed by APRA in *APS 222 Associations with Related Entities*¹. Westpac has an internal limit structure and approval process governing credit exposures to related entities. This limit structure and approval process, combined with APRA's prudential limits, is designed to reduce the potential for unacceptable contagion risk.

Updates to large and related entity exposure limit calculations resulting from the changes to banks' capital requirements are outlined in the Capital Overview section. These changes are effective from 1 January 2027.

1. For the purposes of APS 222, subsidiaries controlled by Westpac, other than subsidiaries that form part of the ELE, represent 'related entities'. Prudential and internal limits apply to intra-group exposures between the ELE and related entities, both on an individual and aggregate basis.

CAPITAL OVERVIEW

Capital management strategy

Westpac's capital management strategy is reviewed on an ongoing basis, including through an annual Internal Capital Adequacy Assessment Process (ICAAP). Key considerations include:

- Regulatory capital minimums together with the capital conservation buffer and countercyclical capital buffer comprise the total CET1 requirement. The total CET1 requirement is currently at least 10.25% and 10.50% effective 1 January 2027¹;
- Strategy, business mix and operations and contingency plans;
- Perspectives of external stakeholders including rating agencies as well as equity and debt investors; and
- A stress testing framework that tests our resilience under a range of adverse economic scenarios.

The Board has determined a target post dividend CET1 capital ratio of above 11.25% in normal operating conditions.

Regulatory developments

APRA's phase out of AT1 capital as eligible bank capital

On 4 December 2025, APRA published the final changes to the relevant prudential and reporting standards resulting from the phase out of AT1 with an effective date of 1 January 2027. Under the revisions, large internationally active banks such as Westpac will replace 1.5% of AT1 capital with 1.25% of Tier 2 capital and 0.25% of CET1 capital. The total CET1 requirement, including regulatory buffers, will increase from 10.25% to 10.50%. There is no overall increase in total capital requirements for banks.

On implementation of these revised prudential and reporting standards, existing AT1 capital instruments would be included in the calculation of the amount of total capital, until their first scheduled call date. Existing Westpac AT1 capital instruments would reach their first scheduled optional redemption dates by 2031 at the latest.

In addition, effective 1 January 2027 the minimum leverage ratio requirement will be 3.25% based on CET1 capital replacing the current requirement of 3.50% based on Tier 1 capital. *APS 221 Large Exposures* and *APS 222 Associations with Related Entities* exposure limits remain unchanged, however will be based on CET1 capital rather than Tier 1 capital.

APRA to consult on enhancements to bank capital and liquidity frameworks

On 16 March 2026, APRA announced that it will consult on a package of reforms to bank capital and liquidity settings. The consultation will be run in three workstreams focusing on credit risk capital, liquidity risk and market risk, which include the following proposals:

- Targeted amendments to the standardised capital framework to increase risk sensitivity and better align capital requirements with underlying risk.
- Changes to the liquidity framework including consideration of a new Pillar 2 liquidity framework to address risks not covered by existing Liquidity Coverage Ratio minimum requirements.
- Implementation of a simplified version of the Basel Committee's Fundamental Review of the Trading Book standard.

APRA has indicated that it will release a consultation paper in respect to the credit risk capital workstream in the first half of the 2026 calendar year with industry engagement and consultation for the liquidity and market risk workstreams to continue into 2027.

RBNZ capital review

On 17 December 2025, the RBNZ announced its decisions relating to its review of key capital settings for deposit takers (2025 Capital Review). Once implemented, the updated settings for Group 1 deposit takers² (including WNZL) will:

- remove AT1 instruments from the capital stack and phase out the recognition of existing AT1 instruments.
- require the deposit taker to have a CET1 capital ratio of 12% (including a 6% prudential capital buffer (PCB) ratio).
- require the deposit taker to have a total capital ratio of 15% (including a 6% PCB ratio). Up to 3% of the total capital requirement can consist of subordinated debt eligible as Tier 2 capital to be issued to the Australian parent bank (which in WNZL's case is Westpac).
- require the deposit taker to have an additional 6% of RWAs of Loss Absorbing Capacity (LAC) instruments to be issued to the Australian parent bank, bringing the total requirement including LAC to 21%.
- introduce more granular and lower standardised risk weights for certain asset classes.

1. Noting that APRA may apply higher CET1 requirements for an individual ADI.

2. New Zealand deposit takers with total assets of NZ\$100 billion or more.

The new Tier 2 and LAC instruments will include conversion to equity or write-off provisions.

On 27 February 2026, the RBNZ released further information relating to the 2025 Capital Review, including further information on indicative transition timelines and confirmation it will continue to consider applications for redemption of AT1 instruments, subject to the relevant prudential requirements being satisfied.

On 13 April 2026, the RBNZ published an exposure draft consultation to update the Banking Prudential Requirements (BPRs) for some of the decisions made as part of the 2025 Capital Review. For Group 1 deposit takers (including WNZL) these draft BPRs propose, as an interim measure, permitting the issuance of Tier 2 instruments with a shorter maturity date or earlier redemption date than is permitted under the current settings. Additionally, a separate amortisation table for Tier 2 instruments issued with a maturity date of less than 5 years has been proposed.

The RBNZ has also indicated it intends to consult during 2026 on the new Tier 2 and LAC instrument design and related implementation timelines.

CAPITAL OVERVIEW

CC1: Composition of regulatory capital

This table provides a view of the components of regulatory capital. Supplementary tables in Appendix I provide details of the Reconciliation of regulatory capital to balance sheet (CC2) and the Composition of regulatory capital (CC1).

\$m	Amounts	Source based on reference of the balance sheet under the regulatory scope of consolidation (CC2)	
As at 31 March 2026			
Common Equity Tier 1 capital: instruments and reserves			
1	Directly issued qualifying common share (and equivalent for non-joint stock companies) capital plus related stock surplus	36,242	a,b
2	Retained earnings	34,885	c
3	Accumulated other comprehensive income (and other reserves)	(1,086)	d
4	Directly issued capital subject to phase-out from CET1 capital (only applicable to non-joint stock companies)	-	
5	Common share capital issued by subsidiaries and held by third parties (amount allowed in group CET1 capital)	3	e
6	Common Equity Tier 1 capital before regulatory adjustments	70,044	
Common Equity Tier 1 capital: regulatory adjustments			
7	Prudent valuation adjustments	-	
8	Goodwill (net of related tax liability)	(7,836)	f
9	Other intangibles other than mortgage servicing rights (MSR) (net of related tax liability)	(2,088)	f
10	Deferred tax assets (DTA) that rely on future profitability, excluding those arising from temporary differences (net of related tax liability)	-	
11	Cash flow hedge reserve	1,875	d
12	Shortfall of provisions to expected losses	-	
13	Securitisation gain on sale (as set out in [CAP30.14])	-	
14	Gains and losses due to changes in own credit risk on fair valued liabilities	(162)	c
15	Defined benefit pension fund net assets	(236)	g
16	Investments in own shares (if not already subtracted from paid-in capital on reported balance sheet)	-	
17	Reciprocal cross-holdings in common equity	-	
18	Investments in the capital of banking, financial and insurance entities that are outside the scope of regulatory consolidation, where the bank does not own more than 10% of the issued share capital (amount above 10% threshold)	-	
19	Significant investments in the common stock of banking, financial and insurance entities that are outside the scope of regulatory consolidation (amount above 10% threshold)	-	
20	MSR (amount above 10% threshold)	-	
21	DTA arising from temporary differences (amount above 10% threshold, net of related tax liability)	-	
22	Amount exceeding the 15% threshold	-	
23	Of which: significant investments in the common stock of financials	-	
24	Of which: MSR	-	
25	Of which: DTA arising from temporary differences	-	
26	National specific regulatory adjustments	(4,661)	
27	Regulatory adjustments applied to Common Equity Tier 1 capital due to insufficient Additional Tier 1 and Tier 2 capital to cover deductions	-	
28	Total regulatory adjustments to Common Equity Tier 1 capital	(13,108)	
29	Common Equity Tier 1 capital (CET1)	56,936

National specific regulatory adjustments

The following table presents the components of the CET1 national specific regulatory adjustments.

\$m	Amounts	Source based on reference of the balance sheet under the regulatory scope of consolidation (CC2)
As at 31 March 2026		
26 National specific regulatory adjustments	(4,661)	
26a Of which: treasury shares	-	
26b Of which: offset to dividends declared under a dividend reinvestment plan (DRP), to the extent that the dividends are used to purchase new ordinary shares issued by the ADI	-	
26c Of which: deferred fee income	390	h
26d Of which: equity investments in financial institutions not reported in rows 18, 19 and 23	(221)	i,j,g
26e Of which: deferred tax assets not reported in rows 10, 21 and 25	(2,881)	k
26f Of which: capitalised expenses	(1,869)	h
26g Of which: investments in commercial (non-financial) entities that are deducted under APRA prudential requirements	(75)	i
26h Of which: covered bonds in excess of asset cover in pools	-	
26i Of which: undercapitalisation of a non-consolidated subsidiary	-	
26j Of which: other national specific regulatory adjustments not reported in rows 26a to 26i	(5)	c

OV1: Overview of Risk Weighted Assets (RWA)

This table presents an overview of Westpac's RWA and minimum capital requirements by risk type and approach.

\$m		RWA			Minimum capital requirements
		31 March 2026	31 December 2025	30 September 2025	31 March 2026
1	Credit risk (excluding counterparty credit risk)	336,739	337,841	334,449	26,940
2	Of which: standardised approach (SA)	22,533	23,398	23,427	1,803
3	Of which: foundation internal ratings-based (F-IRB) approach	33,191	32,220	33,220	2,655
4	Of which: supervisory slotting approach	12,620	12,832	11,130	1,010
5	Of which: advanced internal ratings-based (A-IRB) approach	268,395	269,391	266,672	21,472
6	Counterparty credit risk (CCR)	8,856	8,651	9,060	709

CC2: Reconciliation of regulatory capital to balance sheet

This table provides a view of the balance sheet prepared for Statutory reporting compared with the balance sheet prepared under the Level 2 regulatory scope of consolidation. Supplementary tables in Appendix I provide details of the Reconciliation of regulatory capital to balance sheet (CC2) and the Composition of regulatory capital (CC1).

Details of entities that are not consolidated under the regulatory scope of consolidation are provided in Appendix II.

\$m	Balance sheet as in published financial statements	Under regulatory scope of consolidation	Reference (CC1)
As at 31 March 2026			
Assets

ASSET ENCUMBRANCE

ENC: Asset encumbrance

The following tables show the categories of the balance sheet which has assets that are encumbered. Encumbered assets are assets that the Group is restricted or prevented from liquidating, selling, transferring or assigning due to legal, regulatory, contractual or other constraints.

The main sources of encumbrance for Westpac are:

- Assets that are pledged as collateral;
- Assets pledged under repurchase agreements, covered bonds and securitisation; and
- Assets not freely available due to regulatory requirements.

\$m	Encumbered assets	Unencumbered assets	Total
As at 31 March 2026			
Cash and balances with central banks	7,867	45,621	53,488

CREDIT RISK

CREDIT RISK MANAGEMENT

- CR1: Credit quality of assets
- CR2: Changes in stock of non-performing loans, debt securities and off balance sheet exposures
- CR3: Credit Risk Mitigation Techniques
- CR7: IRB - Effect on RWA of credit derivatives used as CRM techniques
- CR4: Standardised approach – credit risk exposure and credit risk mitigation effects
- CR5: Standardised approach - Exposures by asset classes and risk weights
- CR6: IRB - Credit risk exposures by portfolio and PD ranges
- CR8: RWA flow statements of credit risk exposures under IRB
- CR10: IRB - Specialised lending under the slotting approach

COUNTERPARTY CREDIT RISK

- CCR1: Analysis of CCR exposures by approach
- CCR4: IRB - CCR exposures by portfolio and PD scale
- CCR5: Composition of collateral for CCR exposures
- CCR6: Credit derivatives exposures
- CCR8: Exposure to central counterparties

SECURITISATION

- SEC1: Securitisation exposures in the banking book
- SEC2: Securitisation exposures in the trading book
- SEC3: Securitisation exposures in the banking book and associated regulatory capital requirements – bank acting as originator or as sponsor
- SEC4: Securitisation exposures in the banking book and associated capital requirements – bank acting as investor

CREDIT RISK MANAGEMENT

Credit risk is the risk of financial loss where a customer or counterparty fails to meet their financial obligations to Westpac.

Approach

The Westpac Board through its Board Risk Committee reviews and approves the credit risk management framework and material supporting policies that clearly define roles and responsibilities, acceptable practices, limits and key controls.

The Credit Risk Management Framework describes the principles, methodologies, systems, roles and responsibilities, reports and controls that exist for managing credit risk in Westpac. The Credit Risk Rating System policy describes the credit risk rating system philosophy, design, key features, roles and responsibilities and uses of rating outcomes.

Concentration risk policies cover individual counterparties, industries (e.g. property) and individual countries. In addition, we have policies covering risk appetite statements, environmental, social and governance credit risk, the delegation of credit approval authorities, and all other credit policies that span the end-to-end credit lifecycle.

Credit policies and standards embed the Group's framework requirements throughout Westpac's operating segments. Policies and standards cover the origination, evaluation, approval, documentation, settlement and on-going management of counterparty credit risks, and sector policies guide the extension of credit where industry-specific guidelines are considered necessary.

Credit approval limits represent the formal delegation of credit approval authority to responsible individuals throughout the organisation.

CR1: Credit quality of assets

This table provides an overview of both on and off-balance sheet exposures and their related provision disaggregated across standardised and IRB measurement approaches.

\$m	Gross carrying values of			Of which ECL accounting provisions for credit losses on SA exposures		Of which ECL accounting provisions for credit losses on IRB exposures	Net Values	
	Non-performing exposures	Performing exposures	Allowances / impairments	Allocated in regulatory category of non-performing	Allocated in regulatory category of performing			
As at 31 March 2026								
1	Loans	9,264	853,607	(4,671)	(78)	(58)	(4,535)	858,200
2	Debt Securities	-	110,821	(8)	-	(3)	(5)	110,813
3	Off-balance sheet exposures	524	217,071	(512)	-	(11)	(501)	217,083
4	Total	9,788	1,181,499	(5,191)	(78)	(72)	(5,041)	1,186,096
As at 30 September 2025								
1	Loans	9,657	821,900	(4,504)	(79)	(57)	(4,368)	827,053
2	Debt Securities	-	107,897	(9)	-	(3)	(6)	107,888
3	Off-balance sheet exposures	470	211,501	(468)	-	(13)	(455)	211,503
4	Total	10,127	1,141,298	(4,981)	(79)	(73)	(4,829)	1,146,444

At 31 March 2026, Westpac's credit impairment provisions totalled \$5.2 billion (30 September 2025: \$5.0 billion), with collectively assessed provisions representing 1.29% of credit RWA. Stressed exposures to total committed exposures were 1.16%, compared with 1.28% at 30 September 2025.

CR2: Changes in stock of non-performing loans, debt securities and off balance sheet exposures

The following table discloses the movements in non-performing exposures on loans, debt securities and off-balance sheet credit exposures.

\$m		For the half year ended 31 March 2026	For the half year ended 30 September 2025
1	Non-performing loans and debt securities at end of the previous reporting period	10,127	10,483
2	Loans and debt securities that became non-performing since the last reporting period	4,248	4,862
3	Returned to performing status	(2,541)	(3,130)
4	Amounts written off	(349)	(399)
5	Other changes ^a	(1,697)	(1,689)
6	Non-performing loans and debt securities at end of the reporting period	9,788	10,127

a. Other changes represent collections, and the impact of foreign exchange movements.

CR3: Credit Risk Mitigation Techniques

The table below shows a breakdown of Westpac's on-balance sheet exposures that are secured or unsecured. The secured exposures are then disaggregated by the type of security held.

\$m		Exposures unsecured: carrying amount	Exposures to be secured ^a	Exposures secured by collateral	Exposures secured by financial guarantees	Exposures secured by credit derivatives
As at 31 March 2026						
1	Loans	78,192	780,008	778,491	1,517	-
2	Debt securities	110,204	609	609	-	-
3	Total	188,396	780,617	779,100	1,517	-
4	Of which non-performing	318	7,264	7,262	2	-
As at 30 September 2025

a. Represents exposures that are secured with at least one form of credit risk mitigation.

CREDIT RISK MANAGEMENT

CR7: IRB - Effect on RWA of credit derivatives used as CRM techniques

At present Westpac does not employ credit derivatives as a credit risk management technique¹.

\$m	As at 31 March 2026		As at 30 September 2025		
	Pre-credit derivatives RWA	Actual RWA	Pre-credit derivatives RWA	Actual RWA

CR4: Standardised approach – credit risk exposure and credit risk mitigation effects

This table presents exposures subject to the standardised approach for the calculation of RWA. This includes certain mortgages that are prescribed a standardised risk weight including interest-only mortgages greater than five years and mortgages held by self-managed superannuation funds. Other exposures subject to the standardised approach include Westpac Pacific, margin lending and some other small portfolios.

\$m	Exposures before CCF and CRM		Exposures post-CCF and post-CRM		RWA and RWA density		
	On-balance sheet amount	Off-balance sheet amount	On-balance sheet amount	Off-balance sheet amount	RWA	RWA density (%) ^a

7	Total	39,020	6,702	38,896	2,960	23,427	56%

a. RWA density is calculated based on unrounded numbers.

b. Other includes Commercial property, Land acquisition, development and construction, Margin Lending, Sovereign and Banks.

c. Other assets include cash items, unsettled transactions, fixed assets and other non-interest earning assets.

d. New Zealand also includes NZ CVA and Counterparty credit risk.

1. As defined in APS 112 Attachment J.

CR5: Standardised approach - Exposures by asset classes and risk weights

This table provides a view of the exposure value of each asset class measured under the standardised approach disaggregated across risk weights.

\$m	Asset classes	0%	20%	50%	65%	75%	85%	90%	100%	110%	120%	150%	Other	Total credit exposure amount (post-CCF and post-CRM)

CREDIT RISK MANAGEMENT

CR5: Standardised approach - Exposures by asset classes and risk weights (Continued)

Exposure amounts and CCFs applied to off-balance sheet exposures, categorised based on risk bucket of converted exposures.

The following table shows a breakdown of on and off-balance sheet standardised exposures by risk weights and the weighted average credit conversion factors (CCF) applied against off-balance sheet exposures compared to the exposure amount post CCF and the application of credit risk mitigation techniques.

\$m	Risk weight	On-balance sheet exposure	Off-balance sheet exposure (pre-CCF)	Weighted average CCF ^a	Exposure (post-CCF and post-CRM)
As at 31 March 2026					
1	Less than 40%	17,131	2,198	43%	18,080
2	40–70%	1,635	218	50%	1,757

10	1250%	-	-	-	-
11	Total exposures	39,020	6,702	43%	41,856

a. Weighting is based on off-balance sheet exposure (pre-CCF).

CR6: IRB - Credit risk exposures by portfolio and PD ranges

The following tables provide the main parameters used for the calculation of capital requirements for IRB modelled RWA outcomes (which includes A-IRB and F-IRB).

A-IRB

The following table provides the key parameters used for the calculation of capital requirements for credit risk exposures under the A-IRB approach, broken down by asset class and PD range. Under A-IRB, an ADI can use its own estimates of PD, maturity, LGD & EAD (non-retail portfolios use APRA supervisory estimates for EAD).

A-IRB As at 31 March 2026		Original on- balance sheet gross exposure	Off-balance sheet exposure pre CCF	Average CCF (%)	EAD post CRM and post-CCF	Average PD (%)	Number of borrowers	Average LGD (%)	Average maturity (years)	RWA	RWA density (%)*	EL	Provisions

CR8: RWA flow statements of credit risk exposures under IRB

The following table provides details on the drivers of changes in credit RWA measured under the IRB approach.

\$m	Quarter ended	
	31 March 2026	31 December 2025
1 RWA as at end of previous reporting period	314,443	311,022
2 Asset size	5,212	9,660
3 Asset quality	(2,678)	(3,186)
4 Model updates	500	-
5 Methodology and policy	-	-
6 Acquisitions and disposals	-	-
7 Foreign exchange movements	(1,779)	(886)
8 Other	(1,492)	(2,167)
9 RWA as at end of reporting period	314,206	314,443

CREDIT RISK MANAGEMENT

CR10: IRB - Specialised lending under the slotting approach

Slotting is an approach that is applied to financing for projects where the repayment is highly dependent on the performance of the underlying asset or collateral, and includes assets categorised as specialised lending. It uses specific rules for the calculation of RWAs, based upon an assessment of factors such as the financial strength of the counterparty.

The table below provides an overview of exposure under this approach and associated credit metrics.

\$m		Exposure amount							
Regulatory categories	Residual maturity	On-balance sheet amount	Off-balance sheet amount	Risk weight %	PF	OF	Total	RWA	Expected losses
Westpac (ex-RBNZ Regulated Entities)									
As at 31 March 2026									
Strong	Less than 2.5 years	1,391	830	70%	2,162	34	2,196	1,536	9
	Equal to or more than 2.5 years	2,002	1,040	70%	2,905	26	2,931	2,052	12
Good	Less than 2.5 years	510	297	90%	746	-	746	671	6

COUNTERPARTY CREDIT RISK

Approach

Westpac's process for managing counterparty credit risk is based on its assessment of the potential future credit risk it is exposed to when dealing in derivatives products and securities financial transactions. Westpac quantified this risk through a daily simulation of future market price and rate shocks and converts the effect of these shocks on the mark-to-market value of Westpac's positions to a credit exposure using Westpac's Derivative Risk Equivalent (DRE) methodology. Exposures are assessed against pre-settlement risk limits that are set at the counterparty level. Limit excesses are reported to credit management and actioned within specified timeframes.

The following CCR tables present the counterparty credit risk for Australian exposures only as all other jurisdictions are immaterial and aggregates to \$703 million of RWA as at 31 March 2026. Counterparty credit risk attached to New Zealand regulated exposures are included and reported in the RBNZ regulated entities asset class in credit risk disclosures.

CCR1: Analysis of CCR exposures by approach

The table below presents the counterparty credit risk exposures by approach. This table excludes exposures to central counterparties. Exposures to central counterparties are disclosed in table CCR8.

\$m	Replacement cost	Potential future exposure	Effective EPE	Alpha used for computing regulatory EAD	EAD post-CRM	RWA

COUNTERPARTY CREDIT RISK

CCR5: Composition of collateral for CCR exposures

The following table provides an overview of the type of collateral used in derivatives and securities financing transactions (SFTs).

\$m	Collateral used in derivative transactions				Collateral used in SFTs	
	Fair value of collateral received		Fair value of posted collateral		Fair value of collateral received	Fair value of posted collateral
	Segregated	Unsegregated	Segregated	Unsegregated		
As at 31 March 2026						
Cash	-	3,371	-	8,836	24,002	29,139
Debt	-	60	1,321	1,701	26,400	21,270
Total	-	3,431	1,321	10,537	50,402	50,409
As at 30 September 2025						
Cash	-	2,676	-	7,577	27,698	49,626
Debt	-	4	1,944	2,271	46,706	26,225
Total	-	2,680	1,944	9,848	74,404	75,851

CCR6: Credit derivatives exposures

The table below provides information on the extent of Westpac's exposure to credit derivative transactions.

\$m	31 March 2026		30 September 2025	
	Protection bought	Protection sold	Protection bought	Protection sold
Notionals				
Single-name credit default swaps	-	-	-	-
Index credit default swaps	10,863	9,428	18,074	15,627
Total return swaps	-	-	-	-
Credit options	-	-	-	-
Other credit derivatives	-	-	-	-
Total notionals	10,863	9,428	18,074	15,627
Fair values				
Positive fair value (asset)	-	135	-	353
Negative fair value (liability)	(156)	-	(407)	-

CCR8: Exposure to central counterparties

This table provides an overview of Westpac's exposure to central counterparties.

\$m		31 March 2026		30 September 2025	
		EAD (post-CRM)	RWA	EAD (post-CRM)	RWA
1	Exposures to qualifying central counterparties ('QCCPs') (total)		211		233
2	Exposures for trades at QCCPs (excluding initial margin and default fund contributions); of which	3,743	75	3,657	73
3	(i) OTC derivatives	3,743	75	3,657	73
4	(ii) Exchange-traded derivatives	-	-	-	-
5	(iii) Securities financing transactions	-	-	-	-
6	(iv) Netting sets where cross-product netting has been approved	-	-	-	-
7	Segregated initial margin	1,321		1,944	
8	Non-segregated initial margin ^a	23	27	126	39
9	Pre-funded default fund contributions	101	109	110	121
10	Unfunded default fund contributions	-	-	-	-
11	Exposures to non-QCCPs (total)		-		-
12	Exposures for trades at non-QCCPs (excluding initial margin and default fund contributions); of which	-	-	-	-
13	(i) OTC derivatives	-	-	-	-
14	(ii) Exchange-traded derivatives	-	-	-	-
15	(iii) Securities financing transactions	-	-	-	-
16	(iv) Netting sets where cross-product netting has been approved	-	-	-	-
17	Segregated initial margin	-		-	
18	Non-segregated initial margin	-	-	-	-
19	Pre-funded default fund contributions	-	-	-	-
20	Unfunded default fund contributions	-	-	-	-

a. RWA includes amounts related to the segregated initial margin, which Westpac has elected not to apply a zero risk weight.

SECURITISATION

A securitisation is a financial structure where the cash flow from a pool of assets is used to service obligations to at least two different tranches or classes of creditors (typically holders of debt securities), with each class or tranche reflecting a different degree of credit risk (i.e. one class of creditors is entitled to receive payments from the pool before another class of creditors).

Approach

Westpac's securitisation activities range from a seller of its own assets, to an investor in third-party transactions and includes the arranging of transactions, the provision of securitisation services and the provision of funding for clients, including clients requiring access to capital markets. Securitisation activities follow Westpac's credit policies and approval processes.

The regulatory capital treatment of securitisation exposures is measured in accordance with APS 120 other than the securitisation exposures of an overseas banking subsidiary that is prudentially regulated by a prescribed authority. Outside of Australia, Westpac has securitisation exposures in Westpac New Zealand Limited. For these exposures, Westpac calculates risk-weighted assets using the Reserve Bank of New Zealand's prudential rules. These exposures are separately included in the RBNZ Regulated Entities line item. Westpac makes deductions from CET1 capital that are required under APS 120. APS 120 also specifies that securitisation exposures held in the trading book¹ are subject to the requirements of Prudential Standard *APS 116 Capital Adequacy: Market Risk*.

Under APS 120 the approaches employed include the External Ratings Based Approach (ERBA) which is largely based on external credit ratings and the Supervisory Formula Approach (SFA) for unrated exposures.

Westpac's role in the securitisation process

- Securitisation of Westpac originated assets**
 Securitisation is used by Westpac to manage funding and liquidity and may also be used for capital management. It allows Westpac the ability to use a pool of assets to increase Westpac's wholesale funding capacity. Westpac may provide arm's length facilities and services to the securitisation vehicles. These typically include the provision of financing, redraw facilities and derivative contracts.
- Third party securitisation activities**
 Westpac provides securitisation services, including funding and arranging asset backed bond issues. Westpac also buys and sells securitisation exposure in the secondary market to facilitate portfolio management activity by its institutional customers who hold asset backed bonds.

1. Trading book activity represents positions in financial instruments, including derivative products and other off-balance sheet instruments, that are held either with trading intent or to hedge other elements of the trading book.

SEC3: Securitisation exposures in the banking book and associated regulatory capital requirements – bank acting as originator or as sponsor

MARKET RISK

Traded Market Risk

Market risk is the risk of financial loss arising from movements in market prices, including interest rates, foreign exchange rates, credit spreads, commodity prices, volatility, and derivative valuation adjustments.

Approach

Westpac's exposure to traded market risk arises from Financial Markets and Treasury trading activities. Financial Markets provides products and services such as market making and distribution of capital markets products, resulting in exposure to interest rate, foreign exchange, commodity, credit spread, volatility risk, and derivative valuation adjustments. Treasury manages interest rate, foreign exchange, and credit spread risks associated with the wholesale funding book, liquid asset holdings, and foreign exchange repatriations, as well as interest rate risk in the banking book which is discussed in the IRRBB section.

Market risk is managed within a Board Risk Committee-approved framework, supported by policies that set Value-at-Risk (VaR) and Stressed Value-at-Risk (SVaR) limits. Exposures are measured using VaR, SVaR, structural limits, scenario analysis, and stress testing. Limits are calibrated to reflect risk appetite, business strategy, market liquidity, and concentration risk.

Trades are fair valued daily using independent market data approved by the Revaluation Committee. Where independent rates are unavailable, approved methodologies or external dealer sources are used, with rates reviewed monthly. Valuation adjustments may be made for exposures not captured through the fair valuation framework, in accordance with prudential valuation practices documented in the Model Risk policy and subject to independent validation.

Daily monitoring of exposures and limit utilisation is conducted independently by the Market Risk team, which monitors market risk exposures against VaR, SVaR, and structural limits. Daily position reports are produced by risk type, product line, and geographic region, supplemented by structural risk reporting, profit and loss trigger levels, and stress test escalation points.

Regulatory capital for market risk is determined using both internal model and standardised approaches, in accordance with APRA and Basel standards. Specific risk capital is calculated using the Standard method and added to the VaR measure, with an industry-wide capital overlay applied as required by APRA.

Market risk regulatory capital and risk weighted assets

The table below details the capital and associated RWA by approach. The Internal model approach uses VaR and SVaR, while the Standard approach is used for interest rate specific risk.

\$m	Capital required			Risk weighted assets		
	31 March 2026	30 September 2025	31 March 2025	31 March 2026	30 September 2025	31 March 2025

a. The net market risk measure reflects the aggregate diversified risk position for the period. Therefore, individual risk factors will not sum to this total.

Back-testing results

The following graph gives a comparison of actual profit and loss to VaR over the 6 months ended 31 March 2026.

Each point on the graph represents 1 day's trading profit or loss. This result is placed on the graph relative to the associated VaR utilisation. The downward sloping line represents the point where a loss is equal to VaR utilisation.

INTEREST RATE RISK IN THE BANKING BOOK (IRRBB)

Interest rate risk is the Group's exposure to movements in interest rates. IRRBB arises from changes in market interest rates that impact the Group's earnings (net interest income (NII)) or the economic value of balance sheet categories. The Group manages interest rate risk to achieve appropriate earnings stability over time. The activities that give rise to this risk include customer lending and deposit taking, balance sheet funding and liquidity management and capital management.

Approach

IRRBB is managed and governed under the Group's Market Risk Management Framework which is approved by the BRiskC. This framework is supported by a comprehensive IRRBB measurement system for the quantification of these risks and the potential impact from changes in market interest rates. It includes independent Risk oversight in line with the Group's Three Lines of Defence framework including independent validation of IRRBB models.

IRRBB RWA increased by \$9.8 billion over the period due to a larger embedded loss component from higher long-term interest rates and additional capital required for increased core deposit hedging partly offset by reductions resulting from the revised APS 117 standard changes.

Regulatory RWA (\$m)	31 March 2026	30 September 2025	% Mov't
Interest rate risk in the banking book	47,088	37,290	26

The table below shows the average and longest repricing maturity years assigned to core deposits¹.

	As at 31 March 2026
Average repricing maturity assigned to core deposits	2.5 years
Longest repricing maturity assigned to core deposits	5 years

IRRBB1: Quantitative information on IRRBB²

The table below provides information about changes in the Group's economic value of equity and net interest income under six standardised interest rate shock scenarios as prescribed by the Basel Committee on Banking Supervision. A simple sum across all currencies is used to aggregate exposures for this disclosure.

AUD \$m	31 March 2026	
	ΔEVE	ΔNII
Parallel up	(2,707)	562
Parallel down	2,944	(1,186)
Steeper	652	
Flattener	(1,239)	
Short rate up	(2,165)	
Short rate down	2,307	
Maximum	(2,707)	(1,186)

	31 March 2026
Tier 1 capital	65,458

The ΔEVE outcomes reflect a 12-month earnings offset against the Group's 3-year capital hedge, consistent with APRA's IRRBB management framework per the APS 117 Prudential Standard.

The table below shows the impact of interest rate shock scenarios by currency on the Group's economic value of equity.

ΔEVE (\$m)	31 March 2026			
	AUD	NZD	USD	Other
Parallel up	(2,963)	269	(2)	(11)
Parallel down	3,237	(303)	(1)	11

1. As defined under Attachment A of APS 117.

2. On transition to the revised APS 117 standard, APRA permits ADIs to omit comparatives where new disclosures are reported for the first time.

LEVERAGE RATIO

LR1: Summary comparison of accounting assets vs leverage ratio exposure measure

This table presents an overview of adjustments against Westpac's published total assets for leverage ratio calculation purposes.

\$m	31 March 2026	30 September 2025
1 Total consolidated assets as per published financial statements	1,172,583	1,125,356
2 Adjustment for investments in banking, financial, insurance or commercial entities that are consolidated for accounting purposes but outside the scope of regulatory consolidation	(435)	(392)
3 Adjustment for securitised exposures that meet the operational requirements for the recognition of risk transference	-	-
4 Adjustments for temporary exemption of central bank reserves (if applicable)	-	-
5 Adjustment for fiduciary assets recognised on the balance sheet pursuant to the operative accounting framework but excluded from the leverage ratio exposure measure	-	-
6 Adjustments for regular-way purchases and sales of financial assets subject to trade date accounting	-	-
7 Adjustments for eligible cash pooling transactions	30,239	26,784
8 Adjustments for derivative financial instruments	9,679	16,316
9 Adjustment for securities financing transactions (ie repurchase agreements and similar secured lending)	1,252	16,763
10 Adjustment for off-balance sheet items (ie conversion to credit equivalent amounts of off-balance sheet exposures)	116,244	113,016
11 Adjustments for prudent valuation adjustments and specific and general provisions which have reduced Tier 1 capital	-	-
12 Other adjustments	(15,373)	(15,636)
13 Leverage ratio exposure measure	1,314,189	1,282,207

LR2: Leverage ratio common disclosure template

The table below provides a detailed breakdown of the components of the leverage ratio denominator, as well as information on the leverage ratio, minimum requirements and buffers.

\$m	31 March 2026	31 December 2025	30 September 2025
On-balance sheet exposures			
1 On-balance sheet exposures (excluding derivatives and securities financing transactions (SFTs), but including collateral)	1,149,802	1,125,672	1,104,980
2 Gross-up for derivatives collateral provided where deducted from balance sheet assets pursuant to the operative accounting framework	4,618	4,315	3,715
3 (Deductions of receivable assets for cash variation margin provided in derivatives transactions)	(3,916)	(4,798)	(3,776)
4 (Adjustment for securities received under securities financing transactions that are recognised as an asset)	-	-	-
5 (Specific and general provisions associated with on-balance sheet exposures that are deducted from Tier 1 capital)	-	-	-
6 (Asset amounts deducted in determining Tier 1 capital and regulatory adjustments)	(15,373)	(15,334)	(15,636)
7 Total on-balance sheet exposures (excluding derivatives and SFTs) (sum of rows 1 to 6)	1,135,131	1,109,855	1,089,283
Derivative exposures			
8 Replacement cost associated with all derivatives transactions (where applicable net of eligible cash variation margin, with bilateral netting and/or the specific treatment for client cleared derivatives)	9,782	6,443	7,131
9 Add-on amounts for potential future exposure associated with all derivatives transactions	28,262	28,448	27,710
10 (Exempted central counterparty (CCP) leg of client-cleared trade exposures)	-	-	-
11 Adjusted effective notional amount of written credit derivatives	1,658	2,354	5,726
12 (Adjusted effective notional offsets and add-on deductions for written credit derivatives)	(1,614)	(2,354)	(5,726)
13 Total derivative exposures (sum of rows 8 to 12)	38,088	34,891	34,841
Securities financing transaction exposures			
14 Gross SFT assets (with no recognition of netting), after adjustment for sale accounting transactions	24,845	26,308	42,073
15 (Netted amounts of cash payables and cash receivables of gross SFT assets)	(2,857)	(2,127)	-
16 Counterparty credit risk exposure for SFT assets	2,738	2,748	2,994
17 Agent transaction exposures	-	-	-
18 Total securities financing transaction exposures (sum of rows 14 to 17)	24,726	26,929	45,067

MACRO-PRUDENTIAL SUPERVISORY MEASURES

CCYB1: Geographical distribution of credit exposures used in the calculation of the bank-specific countercyclical capital buffer requirement

This table sets out the ADI specific countercyclical capital buffer. The countercyclical capital buffer is an additional amount of capital that APRA can require banks to hold or release at certain points in the economic and financial cycle. As part of the capital framework, APRA has set a 1.0% default countercyclical capital buffer for Australian exposures. The following table provides a geographic breakdown of RWA associated with private sector credit exposures that are used to calculate the countercyclical capital buffer requirement.

Geographical breakdown	Countercyclical capital buffer rate	RWA used in the computation of the countercyclical capital buffer (\$m)	Bank-specific countercyclical capital buffer rate	Countercyclical capital buffer amount (\$m)
As at 31 March 2026

FUNDING AND LIQUIDITY RISK MANAGEMENT

LIQ1: Liquidity Coverage Ratio

The Liquidity Coverage Ratio (LCR) measures a bank's ability to meet its liquidity needs under an acute liquidity stress scenario (prescribed by APRA), measured over a 30-day time frame. LCR is calculated as high-quality liquid assets (HQLA) as a percentage of net cash outflows (NCO).

Average LCR is calculated as a simple average of the daily observations over the quarter. The number of data points used is reported in the table.

Westpac's average LCR for the quarter was 132% (31 December 2025: 133%) and continues to be above the regulatory minimum of 100% in line with the Group's liquidity risk tolerance.

The decrease in average LCR for the quarter ended 31 March 2026 reflects higher average NCOs, driven by higher average net wholesale funding maturities. This was partly offset by an increase in average liquid assets driven by an increase in RBNZ-eligible securities.

HQLA averaged \$178.0 billion over the quarter (31 December 2025: \$177.9 billion), comprising of cash and balances with central banks, Australian government and semi-government bonds. Westpac also holds other liquid assets, mainly qualifying RBNZ securities.

Funding is sourced from retail, small business, corporate and institutional customer deposits and wholesale funding. Westpac seeks to minimise the outflows associated with this funding by targeting customer deposits with lower LCR outflow rates and actively manages the maturity profile of its wholesale funding portfolio.

\$m	31 March 2026		31 December 2025	
	Total unweighted value (average)	Total weighted value (average)	Total unweighted value (average)	Total weighted value (average)

	Number of data points used		64	64

FUNDING AND LIQUIDITY RISK MANAGEMENT

LIQ2: Net Stable Funding Ratio

The objective of the NSFR is to reduce the funding risk of an ADI over a one-year time horizon by requiring an ADI to fund its activities with sufficiently stable source of funding in order to mitigate the risk of future funding stress.

Westpac's NSFR for the quarter remained unchanged at 112%¹ (31 December 2025: 112%) and continues to be above the regulatory minimum of 100%. The NSFR for the quarter reflects an increase in ASF of \$9.7 billion driven by growth in customer deposits and wholesale funding, offset by an increase in RSF of \$6.8 billion driven by higher lending.

GLOSSARY

DISCLOSURE REGARDING FORWARD-LOOKING STATEMENTS

PRUDENTIAL DISCLOSURE POLICY

This report has been prepared in accordance with Westpac's Prudential Disclosure Policy. This policy defines the framework for the preparation of Pillar 3 disclosures in compliance with APRA's APS 330 requirements. The policy sets out the processes that ensure the appropriateness, accuracy, completeness, consistency and comparability of Westpac's disclosures. It is supported by the Group's broader risk frameworks, policies, and procedures and has been approved by Westpac's Board.

Key features of the policy include frameworks over:

- Accountability and process controls;
- The appropriateness of the content contained in the disclosure;
- The accuracy and comparability of the disclosure; and
- The completeness of the disclosure.

Accountability and process controls

A standard owner is appointed for each Prudential Standard, and attestation of compliance against their respective standards are provided annually as part of the CPS 220 Risk Management due diligence process.

The APS 330 standard owner is responsible for ensuring compliance with APS 330. Standard owners that contribute qualitative and quantitative information required for the Pillar 3 disclosures provide attestations over the accuracy and completeness of the information provided, and the effectiveness of the controls related to their information.

The Chief Financial Officer (CFO) is the accountable officer of the Pillar 3 report and authorises its release, under delegation from the Board. The CFO authorisation is based on the processes that underpin the production of the disclosures. In addition to analytical reviews performed by the APS 330 standard owner, each contributing standard owner reviews their respective contribution. Reviews are also performed by senior management, including the CFO, the Chief Risk Officer (CRO), and the Chief Executive Officer (CEO).

Prior to any release, the APS 330 standard owner reviews the verification report for completeness, and confirms to the Market Disclosure Officer that the disclosure is suitable for release.

External assurance

Although Pillar 3 report is not required to be audited, Westpac engages the external auditor to perform limited assurance over the Pillar 3 report in accordance with the Australian Standard on Assurance Engagements ASAE 3000 *Assurance Engagements Other than Audits or Reviews of Historical Financial Information* and Australian Standard on Review Engagements ASRE 2405 *Review of Historical Financial Information Other than a Financial Report* issued by the Auditing and Assurance Standards Board.

Appropriateness of the content

The content of the disclosure is subject to review at each reporting period by Senior Management to determine relevance and alignment with the material risks applicable to the business. For risks that are considered material, management ensures that there are clear and comprehensive disclosures on Westpac's risk management appetite, strategy, processes and measurement, which are reported in the annual Pillar 3 report.

Accuracy and comparability of disclosure

Prior to the submission of information to APRA, the team generating the information conducts a meeting with the respective standard owners and the business to assess accuracy and alignment with their understanding of drivers.

In addition to controls over verifications, the APS 330 standard owner (or their delegate) overviews and assesses:

- Comparability across other disclosures such as those contain in Westpac's Financial Reports and submissions to APRA; and
- The materiality of any matters impacting disclosure brought to their attention and whether adjustments are required.

Completeness of disclosure

Prior to each reporting period, Westpac completes an assessment of the reporting requirements and updates the report as required, which is approved by the APS 330 standard owner.

MANAGEMENT'S DECLARATION

I hereby certify that the information set out in the March 2026 Pillar 3 report has been prepared in accordance with Westpac's disclosure policy and complying with the requirements of the Australian Prudential Standards, *APS 330 Public Disclosure*.

A handwritten signature in black ink, appearing to read 'Nathan Goonan', with a long horizontal flourish extending to the right.

Nathan Goonan

USD AT1 securities	1,822	
Westpac Capital Notes 7	1,723	
Westpac Capital Notes 8	1,750	
Westpac Capital Notes 9	1,509	
Westpac Capital Notes 10	1,750	
Total per Capital Disclosure Template - Additional Tier 1 Capital Instruments	8,554	Row 30

- Represents deferred tax balances associated with reserves ineligible for inclusion in regulatory capital, goodwill and intangibles.
- For the purposes of CC1, Goodwill and other intangibles are presented net of tax.
- Unamortised issue costs relating to capital instruments are netted off against each instrument in the Balance Sheet. For regulatory capital purposes, these capital instruments are shown gross of unamortised issue costs. The unamortised issue costs are deducted from CET1 as part of capitalised expenses in Row 26f in CC1.
- For regulatory capital purposes, APRA requires these instruments to be included as if they were unhedged.

Total per Capital Disclosure Template - Ordinary share capital issued by subsidiaries and held by third parties (amount allowed in group CET1)	3	Row 5

- a. Unamortised issue costs relating to capital instruments are netted off against each instrument in the Balance Sheet. For regulatory capital purposes, these capital instruments are shown gross of unamortised issue costs. The unamortised issue costs are deducted from CET1 as part of capitalised expenses in Row 26f in CC1.
- b. For regulatory capital purposes, APRA requires these instruments to be included as if they were unhedged.
- c. APRA requires these instruments to be amortised by 20% of the original amount during each of the last five years to maturity.

Appendix II – Level 3 entities' assets and equity

The following legal entities are excluded from the regulatory scope of consolidation.

The total assets and equities should not be aggregated, as they are inclusive of inter-company balances between some of the entities in the table shown below.

31 March 2026	Principal activity	Total assets (\$m)	Total equity (\$m)
Asgard Capital Management Ltd	Funds administrator	52	40
BT Funds Management (NZ) Limited	Funds management	53	40
BT Funds Management Limited	Registrable Superannuation Entity Licensee and Trustee	171	20
BT Funds Management No. 2 Limited	Responsible Entity	12	10
BT Portfolio Services Ltd	Funds administrator	132	83
GIS Private Nominees Pty Limited	Investment services	18	15

Securitor Financial Group Pty Limited	Dormant	4	4
Westpac Financial Services Limited	Responsible Entity	26	17
Westpac New Zealand Staff Superannuation Scheme Trustee Limited	Trustee	-	-
Westpac Securities Administration Pty Limited	Dormant	-	-

APPENDICES

Appendix III – Regulatory expected loss

Capital deduction for regulatory expected loss

For capital adequacy purposes APRA requires the amount of regulatory expected credit losses in excess of eligible provisions to be deducted from capital. The following table shows how the deduction is calculated.

\$m	31 March 2026	30 September 2025	31 March 2025
Provisions associated with eligible portfolios			
Total provisions for impairment charges	5,199	4,987	5,072
plus provisions associated with partial write-offs	328	306	297
less ineligible provisions ^a	(158)	(158)	(197)
Total eligible provisions	5,369	5,135	5,172
Regulatory expected downturn loss	4,332	4,350	4,504
Excess/(shortfall) in eligible provisions compared to regulatory expected downturn loss	1,037	785	668
Common equity Tier 1 capital deduction for regulatory expected downturn loss in excess of eligible provisions^b	-	-	-

a. Provisions associated with portfolios subject to the Basel standardised approach to credit risk are not eligible.

b. Regulatory expected loss is calculated for portfolios subject to the IRB approach to credit risk. The comparison between regulatory expected loss and eligible provisions is performed separately for defaulted and non-defaulted exposures.

GLOSSARY

Capital Adequacy	Description
Common Equity Tier 1 (CET1) Capital	Comprises the highest quality components of capital that consists of paid-up share capital, retained profits and certain reserves, less certain intangible assets, capitalised expenses and software, and investments and retained profits in insurance and funds management subsidiaries that are not consolidated for capital adequacy purposes.
Internal Ratings-Based approach (IRB & A-IRB)	These approaches allow banks to use internal estimates of the risks of their loans as inputs into the determination of the amount of credit risk capital needed to support the organisation. In the Advanced IRB (A-IRB) approach, banks must supply their own estimates for all three credit parameters – probability of default, loss given default and exposure at default.
Leverage ratio	The leverage ratio is defined by APRA as Tier 1 capital divided by the “Exposure measure” and is expressed as a percentage. “Exposure measure” includes on-balance sheet exposures, derivatives exposures, securities financing transaction (SFT) exposures, and other off-balance sheet exposures.
Risk weighted assets (RWA)	Assets (both on and off-balance sheet) are risk weighted according to each asset’s inherent potential for default and what the likely losses would be in case of default. In the case of non-asset backed risks (i.e. market, IRRBB and operational risk), RWA is determined by multiplying the capital requirements for those risks by 12.5.
Securities financing transactions (SFT)	APRA defines SFTs as “transactions such as repurchase agreements, reverse repurchase agreements, and security lending and borrowing, and margin lending transactions, where the value of the transactions depends on the market valuation of securities and the transactions are typically subject to margin agreements.”
Tier 1 Capital	The sum of CET1 and Additional Tier 1 (AT1) Capital. AT1 Capital comprises high quality components of capital that consists of certain securities not included in CET1, but which include loss absorbing characteristics. AT1 instruments convert into equity and absorb losses when certain triggers are met.
Total Capital	The sum of Tier 1 Capital and Tier 2 Capital. Tier 2 Capital includes subordinated instruments and other components of capital that, to varying degrees, do not meet the criteria for Tier 1 Capital, but nonetheless contribute to the overall strength of an ADI and its capacity to absorb losses when certain triggers are met.

Funding and liquidity

Alternative Liquid Assets (ALA)	Assets that qualify for inclusion in the numerator of the LCR in jurisdictions where there is insufficient supply of HQLA.
High-quality liquid assets (HQLA)	Assets which meet APRA’s criteria for inclusion as HQLA in the numerator of the LCR.
Liquidity coverage ratio (LCR)	An APRA requirement to maintain an adequate level of unencumbered high-quality liquid assets, to meet liquidity needs for a 30 calendar day period under an APRA-defined severe stress scenario. Absent a situation of financial stress, the value of the LCR must not be less than 100%. LCR is calculated as the percentage ratio of stock of HQLA, and qualifying RBNZ securities over the total net cash out-flows in a modelled 30 day defined stressed scenario.
Maturity	The maturity date used is drawn from the contractual maturity date of the customer loans.
Net cash outflows (NCO)	Total expected cash outflows minus total expected cash inflows in the specified LCR stress scenario calculated in accordance with APRA’s liquidity standard.
Net Stable Funding Ratio (NSFR)	The NSFR is defined as the ratio of the amount of available stable funding (ASF) to the amount of required stable funding (RSF) defined by APRA. The amount of ASF is the portion of an ADI’s capital and liabilities expected to be a reliable source of funds over a one year time horizon. The amount of RSF is a function of the liquidity characteristics and residual maturities of an ADI’s assets and off-balance sheet activities. ADI’s must maintain an NSFR of at least 100%.

Credit Risk	Description
Credit conversion factor (CCF)	Represents the proportion of undrawn limit expected to be drawn down when a facility enters default.
Credit risk weighted assets (Credit RWA)	Credit risk weighted assets represent risk weighted assets (on-balance sheet and off-balance sheet) that relate to credit exposures and therefore exclude market risk, operational risk and IRRBB.
Corporate	Corporate asset class includes all credit exposures to corporate counterparties and public sector entities, including Income Producing Real Estate (IPRE) with total consolidated annual revenue less than \$750 million.
Financial Institutions	Financial Institutions asset class covers exposures to financial institution counterparties. Financial institutions include, but are not limited to, banks, securities firms, insurance companies and leveraged funds. Credit RWA is measured under FIRB.
Large Corporate	Large Corporate asset class covers exposures to corporate counterparties with consolidated annual revenue greater than \$750 million. Credit RWA is measured under FIRB.
Other Retail	Other Retail asset class covers retail exposures which do not meet the criteria of any other retail asset class.
Qualifying Revolving Retail	Australian Credit Cards, otherwise known as Qualifying Revolving Retail, covers exposure to individuals and not for business purposes which are revolving, unsecured and unconditionally cancellable.
RBNZ Regulated Entities	RBNZ regulated exposures are calculated using RBNZ rules and disclosed separately under a New Zealand class.
Residential Mortgages	Residential Mortgages asset class covers exposures, to individuals and not for business purposes, fully or partially secured by residential property. Non-standard mortgages receive 100% standardised risk weight (rather than the internally-modelled Retail IRB approach).
Securitisation	Exposures relating to Westpac’s involvement in securitisation activities range from a seller of its own assets to an investor in third party transactions and include the provision of securitisation services for its clients.
SME Retail	SME Retail asset class covers exposures where the total exposures are <\$1.5m, the customer does not hold a complex product and consolidated annual revenues are <\$75m. Exposures are managed as part of a portfolio.

GLOSSARY

Credit Risk	Description
Sovereign	Sovereign asset class covers exposures to central and sub-national governments, central banks, and development banks or institutions eligible for zero risk weights. Credit RWA is measured under FIRB.
Specialised Lending	Specialised Lending asset class covers exposures subject to the supervisory slotting approach and includes Project, Object and Commodities Finance. Project Finance is defined as exposures where revenues generated by a single project, are both the primary source of repayment and security for the loan. Object Finance is defined as lending for the acquisition of equipment where the repayment of the loan is dependent on the cash flows generated by the specific assets that have been financed and pledged or assigned to the lender.
Credit valuation adjustment (CVA) risk	The risk of mark-to-market losses related to deterioration in the credit quality of a derivative counterparty also referred to as credit valuation adjustment (CVA) risk.
Default	Refer to non-performing exposures definition.
Expected credit losses (ECL)	Expected credit losses are a probability-weighted estimate of the cash shortfalls expected to result from defaults over the relevant time frame. They are determined by evaluating a range of possible outcomes and taking into account the time value of money, past events, current conditions and forecasts of future economic conditions.
Exposure at default (EAD)	EAD is calculated at facility level and includes outstandings as well as the proportion of committed undrawn that is expected to be drawn in the event of a future default.
Industry	Credit exposures in non-retail asset subclasses are assigned an ANZSIC code based on their primary industry. ANZSIC codes are then allocated to disclosed industry groups. Credit exposures in retail asset subclasses are classified as "retail lending".
Non-performing exposures	Non-performing exposures, are those captured by the regulatory definition of default, contained in <i>APS 220 Credit Risk Management</i> and the RBNZ's Banking Prudential Requirements for New Zealand regulated exposures. Default occurs when either one, or both, of the following has happened: <ul style="list-style-type: none"> Westpac considers that the borrower is unlikely to pay its credit obligations to Westpac in full, without recourse to actions such as realising available security; The borrower is 90 days or more past-due on a credit obligation to Westpac.
Off-balance sheet exposure	Credit exposures arising from facilities that are not recorded on Westpac's balance sheet (under accounting methodology). Undrawn commitments and the expected future exposure calculated for Westpac's derivative products are included in off-balance sheet exposure.
On-balance sheet exposure	Credit exposures arising from facilities that are recorded on Westpac's balance sheet (under accounting methodology).
Probability of default (PD)	Probability of default is a through-the-cycle assessment of the likelihood of a customer defaulting on its financial obligations within one year.
Securitisation	Description
Banking book	The banking book includes all securities that are not actively traded by Westpac.
Sponsor	An ADI would generally be considered a sponsor if it, in fact or substance, manages or advises the securitisation program, places securities into the market, or provides liquidity and/or credit enhancements.
Synthetic securitisation	A securitisation whereby the credit risk, or part of the credit risk, of a pool is transferred to a third party which need not be an SPV. The transfer of credit risk can be undertaken through the use of funded (e.g. credit linked notes) or unfunded (e.g. credit default swaps) credit derivatives or guarantees.
Trading book	Trading book activity represents positions in financial instruments, including derivative products and other off-balance sheet instruments, that are held either with trading intent or to hedge other elements of the trading book.
Market Risk	
Value at risk (VaR)	VaR is a measure of the potential loss in economic value arising from adverse market movements and is calculated over a defined time horizon (typically 1-day or 1-year) at a 99% confidence interval using a minimum of one year of historical data. VaR takes account of all material market variables that may cause a change in the value of the trading portfolio or the banking book including interest rates, foreign exchange rates, price changes, volatility, and the correlation among these variables.
Interest rate risk in the banking book	
Interest rate risk in the banking book (IRRBB)	The risk of loss in earnings or economic value in the banking book as a consequence of movements in interest rates.

Other	Description
AASB	Australian Accounting Standards Board
ADI	Authorised deposit-taking institutions are corporations that are authorised under the Banking Act 1959 to carry on banking business in Australia.
A-IRB	Advanced Internal Ratings-Based Approach
APRA	Australian Prudential Regulation Authority
APS	Australian Prudential Standard
ASF	Available Stable Funding

BCBS	Basel Committee on Banking Supervision
bps	Basis points
BRiskC	Board Risk Committee
CCF	Credit Conversion Factor
CCP	Central counterparty
CCR	Counterparty Credit Risk
CRM	Credit Risk Mitigation
DRE	Derivative Risk Equivalent methodology
D-SIB	Domestic Systemically Important Bank
DTA	Deferred tax assets
EL	Expected losses
ELE	An extended licensed entity (ELE) comprises an ADI and any subsidiaries of the ADI that have been approved by APRA as being part of a single 'stand-alone' entity.
EPE	Expected Positive Exposure
ERBA	External Rating Based Approach
EVE	Economic value of equity
F-IRB	Foundation Internal Ratings-Based Approach
First Half 2026	Six months ended 31 March 2026
G-SIB	Global Systemically Important Bank
IPRE	Income-producing residential real estate
LGD	Loss given default
LVR	Loan-to-valuation ratio
MSR	Mortgage servicing rights
OF	Object finance
OTC	Over-the-counter
PF	Project finance
QCCPs	Qualifying central counterparties
RBNZ	Reserve Bank of New Zealand
RSF	Required Stable Funding
SA	Standardised Approach
SA-CCR	Standardised Approach for counterparty credit risk
Second Half 2025	Six months ended 30 September 2025
SFA	Supervisory Formula Approach
SMA	Standardised Measurement Approach
SME	Small and medium sized enterprise
SVaR	Stressed Value at Risk
TLAC	Total loss-absorbing capacity
WNZL	Westpac New Zealand Limited

DISCLOSURE REGARDING FORWARD-LOOKING STATEMENTS

The information contained in this report contains statements that constitute “forward-looking statements”.

Forward-looking statements are statements that are not historical facts. Forward-looking statements appear in a number of places in this report and include statements regarding Westpac’s current intent, belief or expectations with respect to its business and operations, macro and micro economic and market conditions, results of operations and financial condition and performance, capital adequacy and liquidity and risk management, including, without limitation, future loan loss provisions and financial support to certain borrowers, forecasted economic indicators and performance metric outcomes, indicative drivers, climate- and other sustainability-related statements, commitments, targets, projections and metrics, and other estimated and proxy data.

Words such as ‘will’, ‘may’, ‘expect’, ‘intend’, ‘seek’, ‘would’, ‘should’, ‘could’, ‘continue’, ‘plan’, ‘estimate’, ‘anticipate’, ‘believe’, ‘probability’, ‘indicative’, ‘risk’, ‘aim’, ‘outlook’, ‘forecast’, ‘f’cast’, ‘f’, ‘assumption’, ‘projection’, ‘target,’ goal’, ‘guidance’, ‘objective’, ‘ambition’, ‘pursue’ or other similar words, are used to identify forward-looking statements. These statements reflect Westpac’s current views on future events and are subject to change, certain known and unknown risks, uncertainties and assumptions and other factors which are, in many instances, beyond Westpac’s control (and the control of Westpac’s officers, employees, agents, and advisors), and have been made based on management’s and/or the Board’s current expectations or beliefs concerning future developments and their potential effect upon Westpac.

Forward-looking statements may also be made, verbally or in writing, by members of Westpac’s management or Board in connection with this report. Such statements are subject to the same limitations, uncertainties, assumptions and disclaimers set out in this report.

There can be no assurance that future developments or performance will align with Westpac’s expectations or that the effect of future developments on Westpac will be those anticipated. Actual results could differ materially from those Westpac expects or which are expressed or implied in forward-looking statements, depending on various factors including, but not limited to, those described in the risk factors in Westpac’s First Half 2026 Risk Factors. When relying on forward-looking statements to make decisions with respect to Westpac, investors and others relying on information in this report should carefully consider such factors and other uncertainties and events.

Except as required by law, Westpac assumes no obligation to revise or update any forward-looking statements in this report, whether from new information, future events, conditions or otherwise, after the date of this report.
